

1. Record Nr.	UNINA9910557447003321
Autore	Iriti Marcello
Titolo	Health-Promoting Effects of Traditional Foods
Pubbl/distr/stampa	Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing Institute, 2020
Descrizione fisica	1 electronic resource (168 p.)
Soggetti	Research & information: general Biology, life sciences Food & society
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Food cannot be only considered a combination of constituents with different nutritional values, but its relevance for humans can be fully understood by also taking into account other aspects such as history, culture, ecology, and the environment. Overall, assuming that access to food is secured for all people, traditional dietary patterns are considered safe in terms of longevity, healthy ageing, and morbidity. Indeed, healthy diets have been associated with a reduced risk and incidence of chronic degenerative diseases including cardiovascular disease, type 2 diabetes, metabolic syndrome, certain types of cancers, and neurodegenerative disorders. In general, healthy dietary habits include a low consumption of refined sugars, red meat, and saturated fats, as well as a high intake of fruit, vegetables, legumes, low-fat dairy products, and healthy lipids (from seafood). As an example, the Mediterranean diet can be considered the archetype of a health-promoting lifestyle by virtue of the phytochemical diversity of its food components.
