Sommario/riassunto	This title posits a new explanation of the longstanding textual problem affecting the Words of Institution in St. Luke's Gospel, by arguing that the social situation of the early Christian community explains why such

emendations were made. . . By examining the manner in which manuscripts function as windows into the social world of early Christianity, Billings provides a fruitful study of the longstanding gap in our knowledge of a significant textual problem represented by the Western Text of Luke.

Sommario/riassunto	<p>The success of any activity and process depends fundamentally on the possibility of balancing (symmetry) needs and their satisfaction. That is, the ability to properly define a set of success indicators. The application of the developed new multi-criteria decision-making (MCDM) methods can be eliminated or decreased by decision-makers' subjectivity, which leads to consistency or symmetry in the weight values of the criteria. In this Special Issue, 40 research papers and one review study co-authored by 137 researchers from 23 different countries explore aspects of multi-criteria modeling and optimization in crisp or uncertain environments. The papers propose new approaches and elaborate case studies in the following areas of application: MCDM optimization in sustainable engineering, environmental sustainability in engineering processes, sustainable multi-criteria production and logistics processes planning, integrated approaches for modeling processes in engineering, new trends in the</p>

multi-criteria evaluation of sustainable processes, and multi-criteria decision-making in strategic management based on sustainable criteria.
