    Lingua di pubblicazione   Inglese

    Formato   Materiale a stampa

    Livello bibliografico   Monografia

    Sommario/riassunto   Artificial intelligence (AI) is regarded as the science and technology for
                         producing an intelligent machine, particularly, an intelligent computer
                         program. Machine learning is an approach to realizing AI comprising a
                         collection of statistical algorithms, of which deep learning is one such
                         example. Due to the rapid development of computer technology, AI has
                         been actively explored for a variety of academic and practical purposes
                         in the context of financial markets. This book focuses on the broad
                         topic of "AI and Financial Markets", and includes novel research
                         associated with this topic. The book includes contributions on the
                         application of machine learning, agent-based artificial market
                         simulation, and other related skills to the analysis of various aspects of
                         financial markets.
