   Titolo          The Convergence of Human and Artificial Intelligence on Clinical Care - Part I

   Pubbl/distr/stampa    Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022

   Descrizione fisica    1 online resource (188 p.)

   Soggetti        Medicine

   Lingua di pubblicazione    Inglese

   Formato         Materiale a stampa

   Livello bibliografico    Monografia

   Sommario/riassunto    This edited book contains twelve studies, large and pilots, in five main categories: (i) adaptive imputation to increase the density of clinical data for improving downstream modeling; (ii) machine-learning-empowered diagnosis models; (iii) machine learning models for outcome prediction; (iv) innovative use of AI to improve our understanding of the public view; and (v) understanding of the attitude of providers in trusting insights from AI for complex cases. This collection is an excellent example of how technology can add value in healthcare settings and hints at some of the pressing challenges in the field. Artificial intelligence is gradually becoming a go-to technology in clinical care; therefore, it is important to work collaboratively and to shift from performance-driven outcomes to risk-sensitive model optimization, improved transparency, and better patient representation, to ensure more equitable healthcare for all.
