Sommario/riassunto This Special Issue "Characterization of Nanomaterials" collects nine

selected papers presented at the 6th Dresden Nanoanalysis

Symposium, held at Fraunhofer Institute for Ceramic Technologies and Systems in Dresden, Germany, on 31 August 2018. Following the

specific motto of this annual symposium "Materials challenges-Microand nanoscale characterization", it covered various topics of nanoscale
materials characterization along the whole value and innovation chain,
from fundamental research up to industrial applications. The scope of
this Special Issue is to provide an overview of the current status, recent
developments and research activities in the field of nanoscale materials
characterization, with a particular emphasis on future scenarios.
Primarily, analytical techniques for the characterization of thin films
and nanostructures are discussed, including modeling and simulation.
We anticipate that this Special Issue will be accessible to a wide
audience, as it explores not only methodical aspects of nanoscale
materials characterization, but also materials synthesis, fabrication of
devices and applications.
