

1. Record Nr.	UNINA9910557735103321
Autore	MoraCasal René
Titolo	The second virial coefficients for normal fluids : Their estimation, new approach and correlations
Pubbl/distr/stampa	Heredia, : Editorial Universidad Nacional (EUNA), 2018
Descrizione fisica	1 online resource (166 p.)
Soggetti	Industrial chemistry and chemical engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>The second virial coefficient is a relevant property for determining the effect of the non-ideality of real gases, applicable to the vast majority of existing chemical and industrial processes. An Analysis of the most relevant correlations, based on a new approach. This book can be used by students, researchers and professionals interested in both the fundamentals and the most advanced aspects of the subjects, as well as in the application to chemical process calculations.</p>
