

1. Record Nr.	UNINA9910557735103321
Autore	MoraCasal René
Titolo	The second virial coefficients for normal fluids : Their estimation, new approach and correlations
Pubbl/distr/stampa	Heredia, : Editorial Universidad Nacional (EUNA), 2018
Descrizione fisica	1 electronic resource (166 p.)
Soggetti	Industrial chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	The second virial coefficient is a relevant property for determining the effect of the non-ideality of real gases, applicable to the vast majority of existing chemical and industrial processes. An Analysis of the most relevant correlations, based on a new approach. This book can be used by students, researchers and professionals interested in a both the fundamentals and the most advanced aspects of the subjects, as well as in the application to chemical process calculations.
