

1. Record Nr.	UNINA9910566467303321
Autore	Vignudelli Stefano
Titolo	Coastal Waters Monitoring Using Remote Sensing Technology
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 electronic resource (498 p.)
Soggetti	Research & information: general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Around 10% of the global population lives in the world's coastal zones, mostly concentrated in the world's largest megacities. In many regions, the population is exposed to a variety of natural hazards and space-based observations. This Special Issue will focus on the usage of remote sensing alone or in synergy with in situ measurements and modeling tools to provide precise and systematic information about processes acting in the world's coastal zones.
