

1.	Record Nr.	UNIORUON00000759
	Autore	Convegno Internazionale della ceramica : 20. : 1987; Albisola
	Titolo	Atti 20. Convegno internazionale della ceramica : "Rivestimenti parietali e pavimentali dal Medioevo al Liberty : Albisola, 29-31 maggio 1987 / Centro Ligure per la Storia della Ceramica
	Pubbl/distr/stampa	Albisola, : Centro Ligure per la Storia della Ceramica, 1990
	Descrizione fisica	396 p. : ill. ; 24 cm
	Classificazione	GEN E IX
	Soggetti	Ceramica - Congressi
	Lingua di pubblicazione	Italiano
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Segue, con proprio front.: Atti 21. Convegno internazionale della ceramica : Albisola, 27-29 maggio 1988.
2.	Record Nr.	UNINA9910566468803321
	Autore	Choi Kwonhue
	Titolo	Waveform Design for 5G and beyond Systems
	Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
	Descrizione fisica	1 online resource (102 p.)
	Soggetti	Energy industries and utilities History of engineering and technology Technology: general issues
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia

5G traffic has very diverse requirements with respect to data rate, delay, and reliability. The concept of using multiple OFDM numerologies adopted in the 5G NR standard will likely meet these multiple requirements to some extent. However, the traffic is radically accruing different characteristics and requirements when compared with the initial stage of 5G, which focused mainly on high-speed multimedia data applications. For instance, applications such as vehicular communications and robotics control require a highly reliable and ultra-low delay. In addition, various emerging M2M applications have sparse traffic with a small amount of data to be delivered. The state-of-the-art OFDM technique has some limitations when addressing the aforementioned requirements at the same time. Meanwhile, numerous waveform alternatives, such as FBMC, GFDM, and UFMC, have been explored. They also have their own pros and cons due to their intrinsic waveform properties. Hence, it is the opportune moment to come up with modification/variations/combinations to the aforementioned techniques or a new waveform design for 5G systems and beyond. The aim of this Special Issue is to provide the latest research and advances in the field of waveform design for 5G systems and beyond.
