Titolo Identification and Characterization of Genetic Components in Autism

Spectrum Disorders 2019

Pubbl/distr/stampa Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022

Descrizione fisica 1 electronic resource (256 p.)

Soggetti Research & information: general

Biology, life sciences Genetics (non-medical)

Lingua di pubblicazione Inglese

Formato Materiale a stampa

Livello bibliografico Monografia

Sommario/riassunto The Identification of the Genetic Components of Autism Spectrum

scientists as well as translational-based researchers, primary healthcare providers or physicians, psychologists/psychiatrists, neurologists, developmental pediatricians, clinical geneticists, and other healthcare providers, teachers, caregivers and students involved in autism spectrum disorders (ASD) with the goal to translate information directly to the clinic, education and home setting. Other professionals, students and families might find this textbook of value based on better awareness, causes and understanding of genetic components leading to autism and open avenues for treatment. Genetics play a role with up to 90% of autism, with over 800 currently recognized genes contributing to causes, clinical presentation, treatment, and counseling of family members. This textbook includes

Disorders 2019 will serve as a resource for laboratory and clinical

description, treatment and generating relevant reviews for ASD and related disorders impacting gene expression, profiling, and pathways. Identification of potential risk factors will be discussed, including obesity, microbiota, malignancy, and the immune system, as well as

by experts in the field dedicated to research and clinical care,

13 chapters divided into three sections (clinical, genetics, other) written

their direct or indirect contribution to ASD treatment and causation.
