

1. Record Nr.	UNINA9910566484203321
Autore	Vicente-Vicente Jose Luis
Titolo	Reconnecting People with Nature through Agriculture
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 online resource (242 p.)
Soggetti	Research & information: general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>An increasing number of people live in cities. In recent decades, this, combined with rural abandonment and landscape polarisation, has resulted in high land ownership concentrations and agricultural intensification. This, in turn, has resulted in a significant decrease in the resilience of agriculture and overall food systems and threatens the maintenance of traditional indigenous and peasant farming. Therefore, there is an urgent need to reconnect society with the sustainable use of agroecosystems by fostering resilient social-ecological systems, emphasising the links between the functioning of natural systems and human well-being, and stressing the benefits that people derive from them. This Special Issue aims to highlight impactful research and commentaries that focus on attempts to connect people with nature for the promotion of sustainable agricultural transitions. This Issue embraces inter- and trans-disciplinary studies from multiple disciplines (e.g., agricultural sciences, environmental sciences, geography, economy, and sociology), as well as those incorporating other knowledge systems (e.g., local and indigenous) in the co-construction of knowledge for sustainable agriculture, including studies in rural areas (e.g., GIAHS or HNV farmland) and initiatives that address urban-rural relationships or those developed within metropolitan areas (e.g., community-supported agriculture, food hubs, domestic gardens, multifunctional agriculture, and farmers' or consumers' cooperatives) and studies assessing the societal and ecological impacts of those</p>

initiatives.
