

1. Record Nr.	UNINA9910571747803321
Autore	Briganti Daniele
Titolo	Ingegneria del vento : Un'antica, modernissima scienza / / Daniele Briganti, Claudio Borri
Pubbl/distr/stampa	Firenze : , : Firenze University Press, , 2006
Descrizione fisica	1 online resource (56 pages) : illustrations
Collana	Collana Pluriverso
Disciplina	338.31
Soggetti	Aerial photography in traffic engineering Traffic engineering
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	The volume aims to give the most comprehensive answer to to the question "Why has wind engineering taken on such an important role today?". In their work, the authors proceed by stages. First, they accompany the readers on a historical journey, in which they led a reflection on the ineluctable relationship between man, civilisation and climate; subsequently, they highlight the socio-economic aspects of the phenomenon; finally, they bring to the reader's attention the research activity carried out in the Inter-University Research Centre on Building Aerodynamics and Wind Engineering, throwing a look at some of the engineering examples of the latest generation, which, by their nature, have a strong link with wind action.
