

1. Record Nr.	UNINA9910571792603321
Autore	Jadliwala Murtuza
Titolo	Proceedings of the 2022 ACM Workshop on Wireless Security and Machine Learning // Murtuza Jadliwala
Pubbl/distr/stampa	New York : , : Association for Computing Machinery, , 2022
Descrizione fisica	1 online resource (87 pages)
Disciplina	006.31
Soggetti	Machine learning
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>We are very pleased to welcome you to the 4th ACM Workshop on Wireless Security and Machine Learning (WiseML). ACM WiseML continues to be the premier venue that brings together members of the machine learning, privacy, security, wireless communications, and networking communities from around the world, and offers them the opportunity to share their latest research findings in these emerging and critical areas. It also offers a shared platform to exchange ideas and foster research collaborations, in order to further advance the state of the art. This year, WiseML will be an in-person event in San Antonio, Texas, USA, and is hosted by the Department of Computer Science and the National Security Collaboration Center at the University of Texas at San Antonio (UTSA). The program will be presented in a single track. The technical program this year features 14 outstanding papers that cover a wide variety of security, privacy, and adversarial machine learning problems relating to wireless networks, communications, mobile networks, 5G/IoT systems, cloud systems, cyber physical systems, smartphones, cognitive radios, and emerging applications. Our call for papers attracted 23 qualified submissions from across the globe. These submissions have been carefully reviewed by six Technical Program Committee (TPC) co-chairs, as well as external experts from academia, industrial research labs, and government organizations. WiseML's exciting technical program is enriched by the keynote talk "Accelerating RF Autonomy for Uncertain Environments," by Dr. John</p>

Davies from DARPA, a distinguished leader in the field of machine learning, adaptive radio frequency systems, real-time signal processing, and configurable computing. Warm thanks to the keynote speaker for joining us.
