1. Record Nr.   UNINA9910571793303321

   Autore   Woo Simon S.

   Titolo   Proceedings of the 1st Workshop on Security Implications of Deepfakes
                    and Cheapfakes / / Simon S. Woo, Shahroz Tariq, Hyoungshick Kim

   Pubbl/distr/stampa   New York : , : Association for Computing Machinery, , 2022

   Descrizione fisica   1 online resource (39 pages)

   Disciplina   303.375

   Soggetti   Deepfakes

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Sommario/riassunto   It is our great pleasure to welcome you to the first ACM Workshop on
                    the security implications of Deepfakes and Cheapfakes - WDC 2022,
                    co-located with ACM AsiaCCS 2022. The workshop's mission is to
                    share and discuss novel solutions to the security and privacy-related
                    issues that arise from fake multimedia. A total of ten papers were
                    submitted in response to the call for papers, with authors from four
                    countries: Germany, Israel, South Korea, and the United States. The
                    submissions' significance, novelty, technical quality, and field relevance
                    were all considered. The review process was conducted in a double-
                    blind fashion. The program committee members exerted considerable
                    effort in evaluating the papers, with the majority receiving two or three
                    reviews. Finally, we accepted four short papers with a 57.1% acceptance
                    rate and three poster papers for presentation at the workshop.
