

1. Record Nr.	UNINA9910580205503321
Autore	Agustí-Brisach Carlos
Titolo	Decline of Mediterranean Fruit Crops and Forests Associated with Fungal Trunk Pathogens
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 electronic resource (204 p.)
Soggetti	Research & information: general Biology, life sciences Technology, engineering, agriculture
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This book was established after closing the Special Issue “Decline of Mediterranean Fruit Crops and Forests Associated with Fungal Trunk Pathogens” edited by Dr. Carlos Agustí-Brisach as Guest Editor and Mr. Everett Zhu as Manager Editor. This book represents a collection of papers related to the etiology, epidemiology, and control of fungal trunk diseases in several Mediterranean woody crops such as almond, citrus, grapevine or pistachio, among others. This volume was intended to generate knowledge on the etiology and epidemiology of tree decline syndromes to build a strong foundation for developing effective management approaches to reduce the yield losses caused by these diseases. In addition, a broad collection of techniques to conduct studies on etiology and epidemiology as well as to determine the effect of biotic and abiotic factors enhancing the progression of trunk diseases in woody crops are shown in this book.
