

1. Record Nr.	UNINA9910580207403321
Autore	Vlasov Dmitry
Titolo	Road Dust in Urban and Industrial Environments : Sources, Pollutants, Impacts, and Management
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 electronic resource (296 p.)
Soggetti	Research & information: general Environmental economics Pollution control
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>This book brings together the results of field, experimental, and modeling studies related to road dust and its various size fractions as a key issue in understanding the relationships between several urban and industrial environments, and in the identification of pollution sources. The book is intended for professionals, researchers, and academicians who want to learn about new research findings regarding the chemical composition of road dust and its source, assessments of road dust and aerosol pollution levels (including express technique), environmental hazards and public health risks, the distribution of stable and radioactive isotopes in road dust, the determination of factors affecting the level of dust accumulation on roads and the intensity of its pollution, and the effect of road dust on the atmosphere and other environments. The book also provides data on some of the current challenges in studying road dust, including various aspects of the formation, transport pathways, and accumulation of road dust in urban, industrial and other areas.</p>
