

1. Record Nr.	UNINA9910580209003321
Autore	Montero Estrella
Titolo	Babesia and Human Babesiosis
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 electronic resource (294 p.)
Soggetti	Medicine Epidemiology & medical statistics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Babesiosis, caused by tick-transmitted intraerythrocytic parasites (<i>Babesia</i> spp.), occurs worldwide. The disease mainly affects livestock, but records of infections in humans are increasing, and the disease is considered to be emerging worldwide. This book provides a comprehensive and holistic view of <i>Babesia</i> species that can infect humans. Numerous experts analyze, in detail, basic aspects of the biology of <i>Babesia</i> , the pathology of the babesiosis highlighting the pathogenesis of babesiosis in sickle cell, the eco-epidemiology of tick vectors and the impact of climate change on them, the current status, and future prospects for laboratory diagnosis and measures to prevent transfusion transmission. The book also focused on unidentified <i>Babesia</i> parasites that continue to emerge, most likely from wildlife, for which neither tick vector species nor vertebrate reservoir host species are currently known. Lastly, current and new therapies for infected patients, in vitro and in vivo culture systems for antibabesial evaluation and measures to prevent infections are also considered.
