

1. Record Nr.	UNISALENT0991001482409707536
Autore	Fiedler, Leslie A.
Titolo	The Return of the Vanishing American / Leslie A. Fiedler
Pubbl/distr/stampa	London : Granada, 1972
Descrizione fisica	192 p. ; 20 cm
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
2. Record Nr.	UNIORUON00059051
Autore	KATAGIRI, Yoichi
Titolo	Ise monogatari no kenkyu / Katagiri Yoichi
Pubbl/distr/stampa	Tokyo, : Meiji Shoin, 1970
Descrizione fisica	668 p. ; 22 cm
Classificazione	GIA VI A
Soggetti	LETTERATURA GIAPPONESE - NOVELLISTICA - PERIODO HEIAN/FUJIWARA (794-1185) - CRITICA
Lingua di pubblicazione	Giapponese
Formato	Materiale a stampa
Livello bibliografico	Monografia

3. Record Nr.	UNINA9910580217503321
Autore	Komlosi Istvan
Titolo	Poultry: Breeding, Health, Nutrition, and Management
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 online resource (196 p.)
Soggetti	Biology, life sciences Cultural studies: food and society Research and information: general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Being the largest animal protein producer, the poultry industry is in the focus of mixed-diet consumers (from a welfare point of view, as a medium of functional foods, environmental issues, the use of antibiotics, etc.), as well as the livestock industry in general. The poultry industry is also extremely quick to uptake new technologies (such as biotechnology, mechanization, robotics, and climate and nutrient control) in order to be economically efficient and sustainable. There is constant pressure from pathogens and new threats, such as avian flu, that requires new treatments and biosecurity measures. There are many novel approaches and answers to these challenges. In breeding, molecular genetic tools (genomic selection and genome editing) can be used to increase production efficiency and fitness, especially immunity traits, or to characterize local genetic pools. The One Health approach, which requires a holistic approach, where genetics, nutrition, health treatment, and management need to be considered together, has gained ground in the poultry industry. The gut microbiome seems to be a good indicator of the balanced health of an animal. Artificial intelligence, built into robotic supervision and handling, helps to increase animal comfort and save costs in the workforce. Organic farming takes a different approach and faces different challenges. What could the possible answers be? We are facing</p>

a new era in poultry science. The aim of this Special Issue is to highlight the importance of new findings.
