

1. Record Nr.	UNINA9910583372803321
Autore	Wypych George
Titolo	Handbook of foaming and blowing agents // George Wypych
Pubbl/distr/stampa	Toronto : , : ChemTec Publishing, , 2017
ISBN	1-5231-0908-4
Descrizione fisica	1 online resource (259 pages) : color illustrations
Disciplina	668.4/93
Soggetti	Plastic foams Foamed materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	"A variety of foaming techniques and equipment are available to produce very diverse range of products. Several monographic sources are available to learn about these methods of production but very little is known and discussed about the composition of materials to be processed and additives enhancing foamed products and making the foam production more economical. This book concentrates on the selection of additives for these diverse foaming processes which can be enhanced using available today, modern, chemical means to improve product quality, speed up the process, and broaden the range of products which can be produced using foaming technology. This book has also companion Databook of Blowing and Auxiliary Agents which contains data for these diverse chemical components of formulations of foamed materials and reveals their roles in foaming processes. There is no information which is repeated in both books. They do complement each other giving reader comprehensive information on the subject never published before with such a breadth."--
