

1. Record Nr.	UNINA9910583390003321
Autore	Moran Sean
Titolo	An applied guide to water and effluent treatment plant design // Sean Moran
Pubbl/distr/stampa	Amsterdam, : Elsevier, 2018
ISBN	0-12-811310-3 0-12-811309-X
Descrizione fisica	1 online resource (467 p.) : ill
Disciplina	628.162 628.3
Soggetti	Water - Purification Sewage - Purification Sewage disposal plants - Design and construction Water treatment plants - Design and construction
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Front Cover -- An Applied Guide to Water and Effluent Treatment Plant Design -- Copyright Page -- Contents -- Preface -- Introduction -- Structure -- Acknowledgments -- 1 Introduction: the nature of water and effluent treatment plant design -- What is this Book About? -- A Brief History of Water Treatment Plant Design -- The Literature of Water Treatment Plant Design -- Interaction with Other Engineering Disciplines -- Hydraulic Calculations -- Water Chemistry -- Water Biology -- Economics -- Materials Selection -- The Importance of Statistics in Water and Effluent Treatment -- Statistics in Sewage Treatment Plant Design and Performance -- Statistics and Discharge Consents -- Contractual Arrangements in Water and Effluent Treatment -- Misconceptions in Water and Effluent Treatment Plant Design -- Chemical/Process Engineering Misconceptions -- Academic Misconceptions -- Sales Misconceptions -- Further Reading -- 1 Water engineering science -- Introduction -- 2 Water chemistry -- Hardness and Alkalinity -- Acids and Bases -- Buffering -- Buffer capacity -- Scaling and Aggressiveness -- Oxidation and Reduction -- Oxidizing Disinfectants -- Chlorine -- Chlorine dioxide -- Hypochlorite -- Ozone

-- Dechlorination -- Catalysis -- Osmosis -- Further Reading -- 3
Biology -- Mind the (Biology/Biochemistry) Gap -- Important
Microorganisms -- Bacteria -- Protozoa and Rotifers -- Algae -- Fungi
-- Bacterial Growth -- Biochemistry -- Proteins -- Enzymes -- Fats --
Carbohydrates -- Nucleic Acids -- Metabolism -- The Biology of
Aerobic Water Treatment -- The Biology of Anaerobic Water Treatment
-- Stage 1: Hydrolysis -- Stage 2: Volatile Fatty Acid Production --
Stage 3: Conversion of Higher Fatty Acids to Acetic Acid by Acetogenic
Microorganisms -- Stage 4: Conversion of Acetic Acid to Methane and
Carbon Dioxide by Methanogenic Bacteria.
4 Engineering science of water treatment unit operations --
Introduction -- Coagulation/Flocculation -- Coagulants -- Flocculants
-- Sedimentation/Flotation -- Sedimentation -- Flotation -- Gravity
flotation -- Dissolved air flotation -- Filtration -- Membrane
Filtration/Screening -- Depth Filtration -- Mixing -- Combining
Substances -- Promotion of Flocculation -- Heat and Mass Transfer --
Suspension of Solids -- Gas Transfer -- Adsorption -- Disinfection and
Sterilization -- Dechlorination -- Further Reading -- 5 Fluid mechanics
-- Introduction -- The Key Concepts -- Pressure and Pressure Drop,
Head and Headloss -- Rheology -- Bernoulli's Equations -- Darcy-
Wiesbach Equation -- Less Accurate Explicit Equation -- Stokes Law --
Further Reading -- 2 Clean water treatment engineering --
Introduction -- 6 Clean water characterization and treatment objectives
-- Impurities Commonly Found in Water -- Characterization --
Microbiological Quality -- Color -- Suspended Solids -- Alkalinity --
Iron -- Manganese -- Total Dissolved Solids -- Treatment Objectives
-- Potable Water -- Cooling Water -- Ultrapure Water -- Boiler feed
water -- Pharmaceutical water -- Semiconductor processing water --
Further Reading -- 7 Clean water unit operation design: physical
processes -- Introduction -- Mixing -- High Shear -- Low Shear --
Flocculation -- Settlement -- Clarifier Design -- Sludge blanket
clarification -- Inclined plate settlement tanks -- Horizontal or radial
flow clarification -- Proprietary systems -- Flotation -- Filtration --
Coarse Surface Filtration -- Trash racks -- Band screens -- Fine Depth
Filtration -- Slow sand filters -- Slow sand filter design -- Rapid gravity
filters -- Filters: air scour distribution -- Pressure filters -- Upflow
pressure filters -- Fine Surface Filtration: Membranes --
Ultrafiltration/microfiltration.
Nanofiltration/reverse osmosis -- Configurations of reverse osmosis
membrane systems -- Advantages/disadvantages -- Membrane
materials selection -- Design for fouling -- Solute rejection by reverse
osmosis membranes -- Design methodology -- Adsorption -- Ion
exchange -- Distillation -- Pretreatment -- Types of Distillation
Process -- Gas Transfer -- Stripping -- Physical Disinfection -- UV
Irradiation -- Novel Processes -- Electrodialysis -- Membrane
Distillation -- Forward Osmosis -- Further Reading -- 8 Clean water
unit operation design: chemical processes -- Introduction -- Drinking
Water Treatment -- pH and Aggressiveness Correction -- Coagulation
-- Precipitation -- Softening -- Lime/Soda softening -- Base exchange
softening -- Ion exchange softening -- Membrane treatment -- Iron
and Manganese Removal by Oxidation -- Boiler and Cooling Water
Treatment -- Cooling Water Treatment -- Boiler Water Treatment --
Introduction -- Carryover -- Sludge and scale formation -- Sludge --
Scale -- Other treatment technologies -- 9 Clean water unit operation
design: biological processes -- Introduction -- Discouraging Life --
Disinfection -- Chlorination -- Ozonation -- Dechlorination --
Ultraviolet light -- Membrane filtration -- Sterilization -- Encouraging
Life -- Biological Filtration -- Further Reading -- 10 Clean water

hydraulics -- Introduction -- Pump Selection and Specification -- Pump Types -- Pump Sizing -- Understanding system head -- Determining frictional losses through fittings -- Calculating straight-run headloss -- Determining pump power -- Suction head and net positive suction head -- Hydraulic networks -- Pump curves -- Water hammer/surge analysis -- Open Channel Hydraulics -- Channels -- Chambers and Weirs -- Thin weirs -- Broad weirs -- Flow Control in Open Channels -- Hydraulic Profiles -- Further Reading.

3 Municipal dirty water treatment engineering -- Introduction -- 11 Dirty water characterization and treatment objectives -- Wastewater Characteristics -- Solids -- Biochemical oxygen demand -- Ammonia -- Flowrate and Mass Loading -- Selection of Design Flowrates -- Domestic Component -- Industrial Component -- Infiltration/Exfiltration -- Peaking Factors -- Upstream Flow Equalization -- Selection of Design Mass Loadings -- Treatment Objectives -- Discharge to Environment -- Industrial Reuse -- Reuse as Drinking Water -- Further Reading -- 12 Dirty water unit operation design: physical processes -- Introduction -- Flow Measurement -- Pumping -- Airlifts -- Design constraints -- Line size -- Required percentage submergence -- Other considerations -- Racks and Screens -- Bar Screens -- Screens -- Comminution -- Grit Removal -- Grit Chambers -- Vortex Separators -- Suspended Solids Removal -- Screens and Filters for Residual Suspended Solids Removal -- Granular medium filtration -- Microscreening -- Flow Equalization -- Primary Sedimentation -- Final Settlement Tank Design -- Flotation -- Filtration -- Gas Transfer -- Stripping -- Adsorption -- Other Physical Processes -- Physical Disinfection -- 13 Dirty water unit operation design: chemical processes -- Introduction -- Coagulation -- Chemical Precipitation -- Disinfection -- Chemical Disinfection -- Dechlorination -- Nutrient Removal -- Chemical Removal of Nitrogen -- Chemical Removal of Phosphorus -- Removal of Dissolved Inorganics -- Other Chemical Processes -- 14 Dirty water unit operation design: biological processes -- An Overview of Biological Processes -- Aerobic Attached Growth Processes -- Aerobic Suspended Growth Processes -- Anaerobic Attached Growth Processes -- Anaerobic Suspended Growth Processes -- Combined Aerobic Treatment Processes -- Secondary Treatment Plant Design.

Suspended Growth Processes -- Activated Sludge Physical Facility Design and Selection -- Activated Sludge Process Design -- Yield (aka sludge production factor) -- Sludge loading -- Tank volume -- Tank geometry -- Oxygenation capacity -- Oxygen requirements -- Sludge age and mean cell residence time -- Returned sludge -- MLSS Method -- Settleability Method -- Sludge Volume Index Method -- Trickling Filters -- Hydraulic Loading Rate -- Maximum Organic Loading Rate -- Rotating Biological Contactors -- Natural Systems -- Pond Treatment -- Constructed Wetlands -- Aerated Lagoons -- Stabilization Ponds -- Tertiary Treatment Plant Design -- The Need for Tertiary Treatment -- Treatment Technologies -- Tertiary Treatment Plant Design -- Biological Nutrient Removal -- Biological nitrogen removal -- Design of Nitrifying Biological Filters -- Biological phosphorus removal -- Biological combined nitrogen and phosphorus removal -- Novel Processes -- Bio-Augmentation -- Deep Shaft Process -- Pure or Enhanced Oxygen Processes -- Biological Aerated Flooded Filters -- Sequencing Batch Reactors -- Membrane Bioreactors -- Anaerobic membrane bioreactors -- System design and optimization -- Applications of Membrane Bioreactors -- Upflow Anaerobic Sludge Blanket Process -- Anaerobic Filter Process -- Expanded Bed Anaerobic Reactor -- Two and Three Phase Anaerobic Digestion -- Further

Reading -- 15 Dirty water hydraulics -- Introduction -- Minimum Velocities -- Open Channels -- Straight Channel Headloss -- Rectangular channels -- Circular Channel Headloss -- Shock Losses in Channels -- Outfalls, entries, and exits -- Outfalls -- Flumes -- Penstocks -- Peripheral Channels -- Aeration tanks/collection channels -- Storm overflows -- Weirs -- Thin Weirs -- Broad Weirs -- Steps -- Screens -- Bar Screens -- Velocities -- Rough head losses -- More accurate head losses.

Advanced Open Channel Hydraulics.

Sommario/riassunto

An Applied Guide to Water and Effluent Treatment Plant Design is ideal for chemical, civil and environmental engineering students, graduates, and early career water engineers as well as more experienced practitioners who are transferring into the water sector. It brings together the design of process, wastewater, clean water, industrial effluent and sludge treatment plants, looking at the different treatment objectives within each sub-sector, selection and design of physical, chemical and biological treatment processes, and the professional hydraulic design methodologies. This book will show you how to carry out the key steps in the process design of all kinds of water and effluent treatment plants. It provides an essential refresher on the relevant underlying principles of engineering science, fluid mechanics, water chemistry and biology, together with a thorough description of the heuristics and rules of thumb commonly used by experienced practitioners. The water treatment plant designer will also find specific advice on plant layout, aesthetics, economic considerations and related issues such as odor control. The information contained in this book is usually provided on the job by mentors so it will remain a vital resource throughout your career. Explains how to design water and effluent treatment plants that really work; Accessible introduction to, and overview of, the area that is written from a process engineering perspective; Covers new treatment technologies and the whole process, from treatment plant design, to commissioning.
