Sommario/riassunto	This book examines the ongoing power transition and its ramifications for world order from an international society perspective. In that perspective, the outcome of big changes in the distribution of power is

a matter of socialization rather than structural determination or the resilience of the so-called Liberal world order. Consequently, the key question of this book is how the ongoing power transition affects, and is affected by, the social institutions of world order including sovereignty, the balance of power, international law, diplomacy, trade, humanitarian intervention, national self-determination, and environmental stewardship. The guiding theoretical assumption of the book is that power transition stimulates fundamental institutional change rather than major conflict or a breakdown of international order, while international organizations are key arenas for the realization and negotiation of such changes, not the victims of hegemonic retreat. The argument is pursued in sections on rising and declining powers (Anglo-America, Russia, China and the EU, among others), consequences for the fundamental social institutions and changes in international organizations, globally and regionally. In combination, the chapters reveal the contours of the coming world order. Tonny Brems Knudsen is Associate Professor of International Relations at the Department of Political Science, Aarhus University, Denmark. Cornelia Navari is Visiting Professor of International Affairs at the University of Buckingham and Emeritus Senior Lecturer at the University of Birmingham, UK.

Sommario/riassunto	The book provides a comprehensive overview of the medical implications, pathophysiology, and treatment of Obstructive Sleep Apnea (OSA), a disease that creates increased health risks, most notably those related to the cardiovascular and cerebrovascular systems. The opening chapters are dedicated to the definition of OSA,

its diagnosis, and the treatment options. The following chapters address primary forms of disease presentation in each medical field, with the latest evidence. Given its characteristics, the book will enable the reader to adopt a broad strategy for evaluating and managing OSA patients. In addition, it will be a valuable resource for all the clinicians who treat sleep-disordered breathing, including otolaryngologists, pulmonologists, cardiologists, neurologists, etc.
