Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>This monograph investigates a multitude of emerging technologies including 3D printing, 5G, blockchain, and many more to assess their potential for use to further humanity's shared goal of sustainable development. Through case studies detailing how these technologies are already being used at companies worldwide, author Sinan Küfeolu explores how emerging technologies can be used to enhance progress toward each of the seventeen United Nations Sustainable Development Goals and to guarantee economic growth even in the face of challenges such as climate change. To assemble this book, the author explored the business models of 650 companies in order to demonstrate how innovations can be converted into value to support sustainable development. To ensure practical application, only technologies currently on the market and in use actual companies were investigated. This volume will be of great use to academics, policymakers, innovators at the forefront of green business, and anyone else who is interested in novel and innovative business models and how they could help to achieve the Sustainable Development Goals. This is an open access book.</p>

Sommario/riassunto	This volume is the third in a series of reports documenting excavations at the large protohistoric site of 'En Esur and its extensive burial grounds, located in the northern Sharon plain along a major ancient trade route. The four relatively intact and undisturbed Early Bronze Age burial caves presented in the current volume, excavated in the framework of the Cross Israel Highway Project, revealed over 2000 complete ceramic vessels representing an uninterrupted sequence over several hundred years. These four burial caves comprise an invaluable contribution to our knowledge of the society, trade relations and burial customs in the region during the Early Bronze Age.
