

1. Record Nr.	UNINA9910585770703321
Titolo	Agents and artificial intelligence : 13th International Conference, ICAART 2021, virtual event, February 4-6, 2021, revised selected papers // Ana Paula Rocha, Luc Steels, H. J. van den Herik (editors)
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2022] ©2022
ISBN	3-031-10161-8
Descrizione fisica	1 online resource (353 pages)
Collana	Lecture notes in computer science. Lecture notes in artificial intelligence ; ; 13251
Disciplina	006.3
Soggetti	Artificial intelligence Intelligent agents (Computer software)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Preface -- Organization -- Contents -- Agents -- Specification Aware Multi-Agent Reinforcement Learning -- 1 Introduction -- 2 Foundations -- 2.1 Problem Formulation -- 2.2 Reinforcement Learning -- 2.3 Multi-Agent Reinforcement Learning -- 2.4 Reward Shaping in RL -- 3 Related Work -- 4 Smart Factory Domain -- 5 Specification Transfer -- 6 Evaluation -- 6.1 Experimental Setup -- 6.2 Analysis of Separate Reward Components -- 6.3 Scaling Challenges and Solutions -- 6.4 Safety Constraints as Reward Components -- 6.5 Case Study: Specification Compliant Run-Time Behavior -- 7 Discussion -- 8 Conclusion and Future Work -- References -- Task Bundle Delegation for Reducing the Flowtime -- 1 Introduction -- 2 Related Work -- 3 Multi-agent Situated Task Allocation -- 4 Consumption and Reallocation -- 5 Negotiation Strategy -- 5.1 Peer Modelling -- 5.2 Acceptability Rule -- 5.3 Offer Strategy -- 5.4 Acceptation Strategy -- 5.5 Agent Behaviour -- 6 Results and Discussion -- 6.1 Context of Experiments -- 6.2 Classical Heuristic and Acceptability Criterion -- 6.3 N-Ary Delegation -- 6.4 Distributed Constraint Optimization Problem (DCOP) -- 7 Conclusion -- References -- A Detailed Analysis of a Systematic Review About Requirements Engineering Processes for Multi-agent Systems -- 1 Introduction -- 2 Background -- 2.1

Requirements Engineering -- 2.2 Belief-Desire-Intention Model -- 3  
Related Works -- 4 Research Method -- 4.1 The Research Questions --  
4.2 Identifying and Selecting Primary Studies -- 4.3 Inclusion and  
Exclusion Criteria -- 4.4 Studies Quality Assessment -- 4.5 Data  
Extraction Strategy -- 4.6 Conducting the Review -- 4.7 Data  
Extraction -- 5 Results -- 5.1 Methodologies Analysed in the  
Systematic Review -- 5.2 Coverage in Relation to the Requirements  
Engineering Subareas Defined in SWEBOK -- 5.3 Methodologies  
Supporting the BDI Model.  
5.4 Gaps Found in This Review -- 6 Threats to Validity -- 7 Insights for  
Future Works -- 8 Conclusions and Future Works -- References --  
Automatically-Generated Agent Organizations for Flexible Workflow  
Enactment -- 1 Introduction -- 2 A Running Example -- 3 From  
Business Process Models to Agent Organizations -- 3.1 Ontology and  
Goals from a Business Process -- 3.2 Mapping Goals to Agents via  
Organization -- 3.3 The BPMN2MOISE Tool -- 4 The Automatic  
Definition of Organizations -- 4.1 Heuristic for the Structural  
Specification: Roles and Groups -- 4.2 Heuristic for the Functional  
Specification: Goals and Plans -- 4.3 Heuristic for the Normative  
Specification -- 5 Conclusions -- References -- Negotiation  
Considering Privacy Loss on Asymmetric Multi-objective Decentralized  
Constraint Optimization Problem -- 1 Introduction -- 2 Background --  
2.1 Asymmetric Constraint Optimization Problem with Cost of Private  
Information to Be Published -- 2.2 Criteria and Measurement of Social  
Welfare -- 2.3 Decentralized Complete Solution Method for Asymmetric  
Multi-objective Constraint Optimization Problems Based on Pseudo-  
trees and Dynamic Programming -- 3 Decentralized Solution  
Framework for Selection of Utility Values to Be Published and Solution  
of Published Problems -- 3.1 Basic Design of Proposed Framework --  
3.2 Selection of Newly Published Utility Values -- 3.3 Evaluation Criteria  
for Utility Values to Be Published -- 3.4 Hierarchically Structured Cost  
Vector Integrating Criteria for Publication of Utility Values -- 3.5  
Solving Problems with Published Utility Values -- 4 Additional  
Preprocessing Methods -- 4.1 Trading Utility Between Neighborhood  
Agents -- 4.2 Approximation of Binary Functions -- 5 Evaluation -- 5.1  
Settings of Experiment -- 5.2 Experimental Results -- 6 Discussion --  
7 Conclusion -- References -- Artificial Intelligence.  
Utilizing Out-Domain Datasets to Enhance Multi-task Citation Analysis  
-- 1 Introduction -- 2 Related Work -- 2.1 Sentiment Classification --  
2.2 Intent Classification -- 2.3 Out-Domain Data Utilization -- 3  
Datasets -- 3.1 Sentiment Datasets -- 3.2 Intent Dataset -- 4  
Contributions -- 4.1 ImpactCite -- 4.2 Overcoming Data Scarcity and  
Data Feeding Techniques -- 4.3 Fusion Approach -- 5 Experiments and  
Analysis -- 5.1 Intent Classification -- 5.2 Sentiment Classification --  
5.3 Out-Domain: Evaluating Impact of Additional Data -- 5.4 Multi-  
task Model: Fusing Scientific Sentiment and Intent -- 6 Discussion -- 7  
Conclusion -- References -- Using Possibilistic Networks to Compute  
Learning Course Indicators -- 1 Introduction -- 2 Possibility Theory --  
3 Message Passing Inference -- 4 Compiling Possibilistic Networks -- 5  
Experimentation -- 5.1 Presentation -- 5.2 Results -- 6 Conclusion --  
References -- Assured Deep Multi-Agent Reinforcement Learning for  
Safe Robotic Systems -- 1 Introduction -- 2 Background -- 2.1 Markov  
Decision Process -- 2.2 Multi-Agent Markov Decision Process -- 2.3  
Abstract Markov Decision Process -- 2.4 Single-Agent Reinforcement  
Learning -- 2.5 Multi-Agent Reinforcement Learning -- 2.6 Deep  
Reinforcement Learning -- 2.7 Quantitative Verification -- 3 Domain  
Example -- 4 Approach -- 5 Evaluation -- 5.1 Experimental Set-Up --  
5.2 Radiation Avoidance Patrolling Domain -- 5.3 Multi-Agent Guarded

Flag Collection -- 6 Related Work -- 7 Conclusion -- References --  
How to Segment Handwritten Historical Chronicles Using Fully  
Convolutional Networks? -- 1 Introduction -- 2 Related Work -- 2.1  
Methods -- 2.2 Datasets -- 3 FCN Architecture -- 4 Experimental  
Setup -- 5 Experimental Results -- 5.1 Input Resolution -- 5.2 Loss  
Function Weighting -- 5.3 Training Data Extension -- 5.4 Combined  
Setup -- 5.5 Post-processing -- 5.6 Transfer Learning.  
6 Porta Fontium Integration and Method Tuning -- 7 Conclusions and  
Future Work -- References -- On the Relationship with Toulmin Method  
to Logic-Based Argumentation -- 1 Introduction -- 2 Preliminaries --  
2.1 Toulmin Model of Argumentation -- 2.2 NDSA: Natural Deduction  
for Structured Argumentation -- 3 The Reception and Refinement of  
Toulmin's Model in Logic-Based Argumentation -- 3.1 Reasoning on  
NDSA and Admissible Sets -- 3.2 2-Tier AF: Two-Tier Argumentation  
Framework -- 4 Related Work -- 5 Conclusion and Future Direction --  
References -- Informer: An Efficient Transformer Architecture Using  
Convolutional Layers -- 1 Introduction -- 2 Previous Work -- 3  
Information Organization Layer -- 4 Experiments -- 4.1 Training  
Details -- 4.2 Results Analysis -- 5 Conclusions -- References --  
Improving the Generalization of Deep Learning Classification Models in  
Medical Imaging Using Transfer Learning and Generative Adversarial  
Networks -- 1 Introduction -- 2 Related Work -- 2.1 Transfer Learning  
in Medical Imaging -- 2.2 Generative Adversarial Networks in Medical  
Imaging -- 3 Materials and Methods -- 3.1 Dataset Description and  
Pre-processing -- 3.2 Transfer Learning Models -- 3.3 Generative  
Adversarial Networks (GAN) -- 4 Results -- 4.1 Comparison of Results  
with Other Recent Similar Works -- 5 Discussion -- 6 Conclusions and  
Future Work -- References -- An Interpretable Word Sense Classifier  
for Human Explainable Chatbot -- 1 Introduction -- 2 Related Work --  
3 Proposed Tsetlin Machine Based Word Sense Disambiguation -- 3.1  
Tsetlin Machine -- 3.2 Training of the Proposed WSD Model -- 4  
Performance and Interpretation of WSD -- 4.1 Results -- 4.2  
Explainable WSD -- 4.3 Application of Interpretation in Chatbot -- 5  
Conclusion -- References -- A Tsetlin Machine Framework for Universal  
Outlier and Novelty Detection -- 1 Introduction -- 2 Related Work.  
3 Tsetlin Machine Framework -- 3.1 TM Architecture for Generator --  
3.2 Classifier -- 4 Experiments and Results -- 4.1 Outlier Detection --  
4.2 Novelty Detection in Text -- 5 Conclusions -- References --  
Adding Supply/Demand Imbalance-Sensitivity to Simple Automated  
Trader-Agents -- 1 Introduction -- 2 Prior Work -- 2.1 Automated  
Traders -- 2.2 Critique of Church & Cliff -- 2.3 Measuring  
Imbalance -- 3 Adding MLOFI-Impact to Robot Traders -- 3.1 Simple  
Robot Traders with Impact: AA, ZIP, and ISHV -- 3.2 MLOFI Opinionated  
PRZI Traders for Narrative Economics -- 4 Discussion and Conclusion  
-- References -- Advances in Measuring Inflation Within Virtual  
Economies Using Deep Reinforcement Learning -- 1 Introduction --  
1.1 Proposed System -- 2 Related Works -- 2.1 Parameter Tuning --  
2.2 Game Balance -- 2.3 Automated Game Testing -- 3 History of  
Economies in Games -- 3.1 Eve Online -- 4 Testing Economies -- 5  
Parameter Tuning -- 6 Methods -- 6.1 Economy Design -- 6.2  
Adventure Agents -- 6.3 Co-operative Behaviours -- 6.4 Crafting  
Agents -- 6.5 Training -- 6.6 Economy Sinks -- 6.7 Training -- 6.8  
Parameter Tuning -- 6.9 Data Collection -- 7 Inflation Results -- 7.1  
Results - Parameter Tuning -- 8 Discussion and Future Work --  
References -- Practical City Scale Stochastic Path Planning with Pre-  
computation -- 1 Introduction -- 2 Previous Work -- 3 Framework --  
3.1 City and Edge Weights -- 3.2 Traffic Data -- 3.3 Open Street Map  
-- 3.4 Agents -- 3.5 City Graph Partitioning -- 3.6 Exemplar

Assignment -- 3.7 Base Path Planning Framework -- 3.8 Pre-processing: Building Distance Oracles -- 3.9 Scalable Algorithm -- 4 Experiments and Results -- 4.1 How Many Partitions Are Needed to Represent the City Graph? -- 4.2 Which Partitioning Method We Picked? -- 4.3 Which Exemplar Assignment Approach Is the Best? -- 4.4 How Is the Quality of Approximate Paths?  
4.5 What Is the Time and Space Complexity of Scalable Algorithm?.
