Note generali Nota di bibliografia Includes bibliographical references and index. In this book the diverse objects of the Whipple Museum of the History Sommario/riassunto of Science's internationally renowned collection are brought into sharp relief by a number of highly regarded historians of science in fourteen essays. Each chapter focuses on a specific instrument or group of objects, ranging from an English medieval astrolabe to a modern agricultural 'seed source indicator' to a curious collection of plaster chicken heads. The contributors employ a range of historiographical and methodological approaches to demonstrate the various ways in which the material culture of science can be researched and understood. The essays show how the study of scientific objects -

including instruments and models - offers a window into cultures of scientific practice not afforded by textual sources alone. This title is

also available as Open Access on Cambridge Core.
