                      digital age -- Conclusion.

   Sommario/riassunto Historians make research queries on Google, ProQuest, and the
                      HathiTrust. They garner information from keyword searches, carried
                      out across millions of documents, their research shaped by algorithms
                      they rarely understand. Historians often then visit archives in whirlwind
                      trips marked by thousands of digital photographs, subsequently
                      explored on computer monitors from the comfort of their offices. They
                      may then take to social media or other digital platforms, their work
                      shaped through these new forms of pre- and post-publication review.
                      Almost all aspects of the historian's research workflow have been
                      transformed by digital technology. In other words, all historians - not
                      just Digital Historians - are implicated in this shift. The Transformation
                      of Historical Research in the Digital Age equips historians to be self-
                      conscious practitioners by making these shifts explicit and exploring
                      their long-term impact. This title is also available as Open Access on
                      Cambridge Core.
