Nota di contenuto	Human development changes in modern world Contemporary forms of establishing attachment Attachment, relationships and new technologies from neuroscience perspective Attachment based on new technologies and mental health Contemporary trends in psychological diagnosis and assessment (online psychological diagnosis and therapy) Psychologist dilemmas and challenges in the face of new technologies. Reflections and case studies.
Sommario/riassunto	"This book examines the use of modern technologies in clinical psychological practice. It considers how we define attachment in an age where changes in technology and the COVID-19 pandemic have increased the prevalence of online contact in the process of diagnosis and psychological treatment. Based on an attachment paradigm that is relatively unexplored, the book outlines how modern online contact influences mental health and development, along with the therapeutic relationship between client and professional. It discusses people's relationships with new technologies, how relationships can be established using these technologies, and how these technologies affect professional relationships between psychologists and their clients, which they define as e-attachment. In the context of new technologies, the book draws on neurobiology and clinical psychology to consider mental health, social functioning, and emotional regulation. Presenting both theory and examples from case studies, this cutting-

edge book will be of great interest to researchers, academics, and post-graduate students in the fields of clinical psychology, psychotherapy, and mental health. Those also carrying out research into digital and online learning within the field of mental health will also benefit from this text".

Nota di contenuto	Introduction -- Test Data Exclusivity: Raison d'être -- Test Data Exclusivity and Art 39(3) TRIPS -- Test Data Exclusivity in the US and the EU -- Index of Data Exclusivity and Access (IDEAS) - Free Trade Agreements -- Index of Data Exclusivity and Access (IDEAS) - National

Sommario/riassunto

This book explores the concept of test data exclusivity protection for pharmaceuticals. Focusing on Art 39(3) of the WTO Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS Agreement) and relevant provisions in selected free trade agreements (FTA) and national laws, it combines normative, historical, comparative and economic analysis of test data exclusivity protection. At the heart of this book is the novel and original Index of Data Exclusivity and Access (IDEAS), which analyzes the effectiveness of test data exclusivity provisions in FTAs and national laws both on the strength of exclusivity as well as on access to medicine. IDEAS provides a framework for the assessment of current test data exclusivity protection standards on the basis of their proximity to Article 39(3) of the TRIPS Agreement, the scope of exclusivity and the flexibilities in FTAs, and subsequently in national laws. This book aims to broaden national and international policy makers' grasp of the various nuances of test data exclusivity protection. Furthermore, it provides practical recommendations with regard to designing an appropriate legal system with a strong focus on promoting access to medicine for all.
