   Sommario/riassunto This open access book looks into the roles and practices of small and
                       micro-enterprises in formal and informal economies across seven
                       countries and one territory in terms of how they contribute to
                       environmental and sustainable development and green skills
                       promotion. By taking into account the perspectives in these four
                       sectors, catering, automotive, waste management and polyvinyl
                       chloride production, this book maps environmental green practices in
                       the region, identifying mechanisms used to assess existing skills (i.e.
                       knowledge, skills and competencies), and evaluating the potential for
                       green skills inclusion in recognition, validation and accreditation.
