

1. Record Nr.	UNINA9910590070203321
Titolo	Formal modeling and analysis of timed systems : 20th international conference, FORMATS 2022, Warsaw, Poland, September 13-15, 2022, proceedings / / Sergiy Bogomolov, David Parker (editors)
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2022] ©2022
ISBN	3-031-15839-3
Descrizione fisica	1 online resource (315 pages)
Collana	Lecture notes in computer science ; ; Volume 13465
Disciplina	003.3
Soggetti	Computer simulation Formal methods (Computer science) System analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Organization -- Abstracts -- A Behaviour-Based Approach to Quantitative Validation of Cyber-Physical Systems -- A Personal History of Formal Modeling and Analysis of Timed Systems Before There was FORMATS -- Contents -- Invited Papers -- Algebraic Model Checking for Discrete Linear Dynamical Systems -- 1 Introduction -- 1.1 Skolem Oracles -- 1.2 Main Results -- 2 Algebraic Model Checking -- 3 Conclusion -- References -- Zone-Based Verification of Timed Automata: Extrapolations, Simulations and What Next? -- 1 Introduction -- 2 Birth of Timed Automata for Verification: The Early 90's -- 2.1 Preliminaries -- 2.2 The Timed Automaton Model ch2AD90,ch2AD94 -- 3 A Symbolic Approach to the Verification of Timed Automata -- 3.1 Zones and Symbolic Forward Computation -- 3.2 Difference Bounded Matrices (DBMs) -- 3.3 Efficiency of the Forward Analysis -- 4 Extrapolation: A First Solution -- 4.1 The First Extrapolation Operator -- 4.2 Two Refinements of This Approach -- 4.3 Problems with Diagonal Clock Constraints -- 5 Simulation: An Alternative Solution -- 6 Beyond Reachability -- 6.1 Weighted Timed Automata -- 6.2 Liveness Properties -- 7 Tools -- 7.1 A Tool for Verifying Timed Automata: Uppaal -- 7.2 The Tool TChecker -- 8 What Next? -- 8.1 BDD and SAT Based Methods -- 8.2 The Local-Time

Semantics and Partial-Order Reduction -- 8.3 Domain-Specific Algorithms -- 8.4 Richer Models -- References -- Monitoring Timed Properties (Revisited) -- 1 Introduction -- 2 Related Work -- 3 Preliminaries -- 4 Monitoring in a Timed Setting -- 5 Time Divergence -- 6 A Symbolic Method for Monitoring -- 7 Time Uncertainty -- 8 Time Predictive Monitoring -- 9 Conclusion -- References -- Probabilistic and Timed Systems -- Bounded Delay Timed Channel Coding -- 1 Introduction -- 2 Preliminary Work -- 2.1 Timed Languages and Timed Automata.

2.2 Entropy and Capacity -- 2.3 Pseudo-Distance on Timed Languages -- 2.4 The Factor Language -- 3 Bandwidth -- 3.1 Definitions -- 3.2 Examples -- 3.3 Existence of Limits -- 4 Encodings -- 4.1 Definition -- 4.2 Necessary Condition -- 4.3 Sufficient Condition -- 5 Conclusion and Further Work -- References -- Robustly Complete Finite-State Abstractions for Verification of Stochastic Systems -- 1 Introduction -- 2 Preliminaries -- 2.1 Canonical Sample Space -- 2.2 Markov Transition Systems -- 2.3 Weak Convergence and Prokhorov's Theorem -- 2.4 Discrete-Time Continuous-State Stochastic Systems -- 2.5 Robust Abstractions -- 3 Soundness of Robust IMC Abstractions -- 3.1 Weak Compactness of Marginal Space Mt of Probabilities -- 3.2 Weak Compactness of Probability Laws of I on Infinite Horizon -- 3.3 Soundness of IMC Abstractions -- 4 Robust Completeness of IMC Abstractions -- 5 Conclusion -- References -- Model Checking for Entanglement Swapping -- 1 Introduction -- 2 Preliminaries -- 2.1 Probabilistic Timed Automata -- 3 Modeling and Validation -- 3.1 The PTA Model -- 3.2 Validation Through Simulations -- 4 Experimental Setup -- 5 Results -- 6 Discussions and Outlook -- References -- Temporal Logic -- An STL-Based Formulation of Resilience in Cyber-Physical Systems -- 1 Introduction -- 2 Preliminaries -- 3 Specifying Resilience in STL -- 3.1 Resiliency Specification Language -- 3.2 Semantics of Resiliency Specifications -- 4 Case Study -- 4.1 UAV Package Delivery -- 4.2 Multi-agent Flocking -- 5 Related Work -- 6 Conclusion -- References -- MITL Verification Under Timing Uncertainty -- 1 Introduction -- 2 Preliminaries -- 2.1 Set Theory -- 2.2 Topology -- 3 Problem Formulation -- 3.1 Syntax and Semantics of MITL -- 3.2 Truth Sets and Interval Queues -- 4 Interval Queue Fundamentals -- 4.1 Construction Algorithm -- 4.2 Complementation Algorithm.

5 Verification Procedure -- 5.1 Operators in the Interval Queue Domain -- 5.2 Constructing Under- and Over-Approximations -- 5.3 Conservativeness -- 6 Numerical Example -- 7 Conclusion -- A Proof of Theorem 1 -- References -- Classification of Driving Behaviors Using STL Formulas: A Comparative Study -- 1 Introduction -- 2 Preliminaries -- 3 Specifying Longitudinal Driving Behavior with STL -- 4 Methods -- 5 Experiments -- 6 Discussion and Conclusions -- References -- Timed Automata and Games -- Timed Games with Bounded Window Parity Objectives -- 1 Introduction -- 2 Preliminaries -- 3 Bounded Window Objectives -- 4 Verification of Timed Automata -- 5 Solving Timed Games -- References -- Non-blind Strategies in Timed Network Congestion Games -- 1 Introduction -- 2 Preliminaries -- 2.1 Timed Network Congestion Game -- 2.2 Studied Problems -- 3 Existence and Computation of Nash Equilibria -- 3.1 Transformation into an Equivalent Finite Concurrent Game -- 3.2 Existence of Nash Equilibria -- 3.3 Computation of Nash Equilibria -- 4 Social Optimality and Prices of Anarchy and Stability -- 4.1 Constrained-Social-Welfare Problem: Asymmetric Case -- 4.2 Constrained-Social-Welfare Problem: Symmetric Case -- 4.3 Social Optimum and Prices of Anarchy and Stability -- References -- Efficient Convex Zone Merging in Parametric

Timed Automata -- 1 Introduction -- 2 Preliminaries -- 3 Efficient State Merging in Parametric Timed Automata -- 3.1 Merging Algorithm -- 3.2 Heuristics for Merging -- 3.3 Preservation of Properties -- 4 Experiments -- 4.1 Dataset and Experimental Environment -- 4.2 Description of the Experiments -- 5 Conclusion -- A Results for All Heuristics on the Full Benchmark -- References -- Neural Networks -- Neural Network Repair with Reachability Analysis -- 1 Introduction -- 2 Deep Neural Network Repair -- 2.1 Provably Safe DNNs. 2.2 DNN Agent Repair for Deep Reinforcement Learning -- 2.3 Computation of Exact Unsafe Domain of ReLU DNNs -- 3 Framework for DNN Repair -- 3.1 Formulation of Loss Function for Problems 1 & 2 -- 3.2 Repair for Deep Reinforcement Learning -- 4 Experiments and Evaluation -- 4.1 Repair of ACAS Xu Neural Network Controllers -- 4.2 Rocket Lander Benchmark -- 5 Conclusion and Future Work -- References -- On Neural Network Equivalence Checking Using SMT Solvers -- 1 Introduction -- 2 Preliminaries: Neural Networks -- 2.1 Notation -- 2.2 Neural Networks -- 3 Strict and Approximate Equivalences for Neural Networks -- 3.1 Strict Neural Network Equivalence -- 3.2 Approximate Neural Network Equivalences Based on L_p Norms -- 3.3 Approximate Neural Network Equivalences Based on Order of Outputs -- 3.4 Hybrid L_p -argsort Equivalences -- 3.5 The Neural Network Equivalence Checking Problem -- 3.6 Discussion of Application Domains for the Above Equivalence Relations -- 4 Neural Network Equivalence Checking Using SMT Solvers -- 4.1 Encoding Neural Networks as SMT Formulas -- 4.2 Encoding of the Equivalence Relation -- 4.3 Optimizing the Encoding -- 5 Experimental Results -- 5.1 Sanity Checks -- 5.2 Equivalence Checking -- 6 Related Work -- 7 Conclusions -- References -- Reachability Analysis of a General Class of Neural Ordinary Differential Equations -- 1 Introduction -- 2 Background and Problem Formulation -- 2.1 General Neural ODE -- 2.2 NODE: Applications -- 2.3 Reachability Analysis -- 2.4 Reachability Methods -- 3 Evaluation -- 3.1 Method and Tool Comparison -- 3.2 Case Study: Adaptive Cruise Control (ACC) -- 3.3 Classification NODEs -- 4 Related Work -- 5 Conclusion and Future Work -- References -- Reinforcement Learning -- Robust Event-Driven Interactions in Cooperative Multi-agent Learning -- 1 Introduction -- 1.1 Main Contribution -- 2 Preliminaries. 2.1 Notation -- 2.2 MDPs and Multi-agent MDPs -- 2.3 Value Functions and Q-Learning in c-MMDPs -- 3 Information Sharing Between Collaborative Agents: Problem Formulation -- 4 Efficient Communication Strategies -- 4.1 Event-Driven Interactions -- 5 Robustness Surrogate and Its Computation -- 5.1 Learning the Robustness Surrogate with the Scenario Approach -- 6 Experiments -- 6.1 Benchmark: Collaborative Particle-Tag -- 6.2 Computation of Robustness Surrogates -- 6.3 Results -- 7 Discussion -- References -- Learning that Grid-Convenience Does Not Hurt Resilience in the Presence of Uncertainty -- 1 Introduction -- 2 Case Study -- 3 Methodology -- 4 Results -- 5 Reproducibility and Conclusions -- References -- Author Index.
