Nota di contenuto	Chapter 1: AI First -- Chapter 2: The Can-Do Power -- Chapter 3: "The Successive Discredits" of the Western Vision of Development -- Chapter 4: The Supply Chains - The Battle is for Control, not for Liberalization -- Chapter 5: Eurasia's Geopolitical Development -- Chapter 6: Romania - 30 Years of Improvisation.
Sommario/riassunto	This book focuses on current trends in development, arguing that the digital revolution will shape today's race for global supremacy. The volume explores how the technological race, driven by AI advances, will decisively contribute to shaping a new world order. Every leap in technological advancement changes the rules of the game and initiate new cycles of economic growth. The main argument of the authors is that these changes are particularly intense in Eurasia, the main geopolitical hotspot at the moment. Starting from recent statistical data, the authors underline this new ascent of the Asian continent - a shift that can be best described as a historical change of relay not

between two countries, but between two continents. Lastly, the volume discusses the consequences of these shifts in power and influence, by reflecting on the possible new world order to follow. Effectively providing an overview of the challenges that will decisively shape future geopolitical relations, this volume will be of use to researchers and students interested in globalization studies, international relations, geopolitics, and development. .
