Titolo	General Anesthesia as a Multimodal Individualized Clinical Concept
Pubbl/distr/stampa	Basel, : MDPI Books, 2022
Descrizione fisica	1 electronic resource (86 p.)
Soggetti	Medicine Clinical & internal medicine
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	In this book, a series of modern multimodal monitoring techniques during general anesthesia are presented, with a focus on patient-oriented anesthesia based on the individual needs of each patient reflected in the degree of hypnosis, the nociception–antinociception balance, and neuromuscular transmission. Moreover, a series of secondary implications for hemodynamic status, post-anesthetic recovery, and patient satisfaction are highlighted.
