

1. Record Nr.	UNINA9910595596803321
Autore	Inamuddin <1980->
Titolo	Biodegradable Materials and Their Applications
Pubbl/distr/stampa	Newark : , : John Wiley & Sons, Incorporated, , 2022 ©2023
ISBN	1-119-90530-3 1-119-90528-1
Descrizione fisica	1 online resource (881 pages)
Altri autori (Persone)	AltalhiTariq
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Half-Title Page -- Series Page -- Title Page -- Copyright Page -- Contents -- Preface -- 1 Biodegradable Materials in Electronics -- 1.1 Introduction -- 1.2 Biodegradable Materials in Electronics -- 1.2.1 Advantages of Biodegradable Materials -- 1.3 Silk -- 1.4 Polymers -- 1.4.1 Natural Polymers -- 1.4.2 Synthetic Polymers -- 1.5 Cellulose -- 1.6 Paper -- 1.7 Others -- 1.8 Biodegradable Electronic Components -- 1.9 Semiconductors -- 1.10 Substrate -- 1.11 Biodegradable Dielectrics -- 1.12 Insulators and Conductors -- 1.13 Conclusion -- Declaration About Copyright -- References -- 2 Biodegradable Thermoelectric Materials -- 2.1 Introduction -- 2.2 Biopolymer-Based Renewable Composites: An Alternative to Synthetic Materials -- 2.3 Working Principle of Thermoelectric Materials -- 2.4 Biopolymer Composite for Thermoelectric Application -- 2.4.1 Polylactic Acid-Based Thermoelectric Materials -- 2.4.2 Cellulose-Based Biocomposites as Thermoelectric Materials -- 2.4.3 Chitosan-Based Biocomposites as Thermoelectric Materials -- 2.4.4 Agarose-Based Biocomposites as Thermoelectric Materials -- 2.4.5 Starch-Based Biocomposites as Thermoelectric Materials -- 2.4.6 Carrageenan-Based Biocomposites as Thermoelectric Materials -- 2.4.7 Pullulan-Based Composites as Thermoelectric Materials -- 2.4.8 Lignin-Based Biocomposites as Thermoelectric Materials -- 2.5 Heparin-Based Biocomposites as Future Thermoelectric Materials -- 2.6 Conclusions -- References -- 3

Biodegradable Electronics: A Newly Emerging Environmental Technology -- 3.1 Introduction -- 3.2 Properties of Biodegradable Materials in Electronics -- 3.3 Transformational Applications of Biodegradable Materials in Electronics -- 3.3.1 Cellulose -- 3.3.2 Silk -- 3.3.3 Stretchable Hydrogel -- 3.3.4 Conjugated Polymers and Metals -- 3.3.5 Graphene -- 3.3.6 Composites -- 3.4 Biodegradation Mechanisms.

3.5 Conclusions -- Acknowledgements -- References -- 4 Biodegradable and Bioactive Films or Coatings From Fish Waste Materials -- 4.1 Introduction -- 4.2 Fishery Chain Industry -- 4.2.1 Evolution of the Fishery Chain Industry -- 4.2.2 Applications of Fish Waste Materials -- 4.3 Films or Coatings Based on Proteins From Fish Waste Materials -- 4.3.1 Films or Coatings for Food Packaging -- 4.3.2 Development of Protein-Based Films or Coatings -- 4.3.2.1 Fish Proteins and Processes for Obtaining Collagen/Gelatin and Myofibrillar Proteins -- 4.3.2.2 Development of Biodegradable and Bioactive Films or Coating -- 4.3.3 Development of Protein-Based Films or Coatings Incorporated With Additives and/or Plasticizers -- 4.3.3.1 Films or Coatings Incorporated With Organic Additives and/or Plasticizers and Their Applications -- 4.3.3.2 Films or Coatings Incorporated With Inorganic Additives and/or Plasticizers -- 4.4 Conclusion -- References -- 5 Biodegradable Superabsorbent Materials -- 5.1 Introduction -- 5.2 Biohydrogels: Superabsorbent Materials -- 5.3 Polysaccharides: Biopolymers from Renewable Sources -- 5.3.1 Carboxymethylcellulose (CMC) -- 5.3.2 Chitosan (CH) -- 5.3.3 Alginate -- 5.3.4 Carrageenans -- 5.4 Applications of Superabsorbent Biohydrogels (SBHs) Based on Polysaccharides -- 5.5 Conclusion and Future Perspectives -- Acknowledgments -- References -- 6 Bioplastics in Personal Protective Equipment -- 6.1 Introduction -- 6.2 Conventional Personal Protective Equipment -- 6.2.1 Face Masks -- 6.2.1.1 Surgical Mask -- 6.2.1.2 N95 Face Masks -- 6.2.1.3 KN95 Face Masks -- 6.2.1.4 Cloth Face Masks -- 6.2.1.5 Two-Layered Face Mask (or Hygienic) -- 6.2.2 Gloves -- 6.2.2.1 Latex -- 6.2.2.2 Nitrile -- 6.2.2.3 Vinyl -- 6.2.2.4 Foil (Polyethylene) -- 6.3 Biodegradable and Biobased PPE -- 6.3.1 Face Masks -- 6.3.1.1 Polylactic Acid -- 6.3.1.2 Polybutylene Succinate. 6.3.1.3 Polyvinyl Alcohol -- 6.3.2 Gloves -- 6.3.2.1 Butadiene Rubber (BR) -- 6.3.2.2 Polyisoprene Rubber -- 6.4 Environmental Impacts Caused by Personal Protective Equipment Made of Bioplastics -- 6.4.1 Source and Raw Materials -- 6.4.2 End of Life Scenarios -- 6.4.3 Remarks on Biodegradability -- 6.5 International Standards Applied to Biodegradable Plastics and Bioplastics -- 6.6 Conclusions -- References -- 7 Biodegradable Protective Films -- 7.1 Introduction -- 7.1.1 Types of Protective Films -- 7.2 Biodegradable Protective Films -- 7.2.1 Processing of Biodegradable Protective Films -- 7.2.2 Limitations Faced by Biodegradable Protective Films -- References -- 8 No Plastic, No Pollution: Replacement of Plastics in the Equipments of Personal Protection -- 8.1 Introduction -- 8.2 Bioplastics -- 8.3 Biodegradation of Bioplastics -- 8.4 Production of Bioplastics from Plant Sources -- 8.5 Production of Bioplastics from Microbial Resources -- 8.6 What Are PPEs Made Off? -- 8.6.1 Face Masks -- 8.6.2 Face and Eye Shields -- 8.6.3 Gloves -- 8.7 Biodegradable Materials for PPE -- 8.8 Conclusion and Future Perspectives -- References -- 9 Biodegradable Materials in Dentistry -- 9.1 Introduction -- 9.2 Biodegradable Materials -- 9.2.1 Synthetic Polymers -- 9.2.2 Natural Polymers -- 9.2.3 Biodegradable Ceramics -- 9.2.4 Bioactive Glass -- 9.2.5 Biodegradable Metals -- 9.3 Biodegradable Materials in Suturing -- 9.4 Biodegradable Materials in Imaging and Diagnostics -- 9.5 Biodegradable Materials in Oral Maxillofacial and Craniofacial Surgery -- 9.6 Biodegradable Materials in

Resorbable Plate and Screw System -- 9.7 Biodegradable Materials in Alveolar Ridge Preservation -- 9.8 Biodegradable Materials of Nanotopography in Cancer Therapy -- 9.9 Biodegradable Materials in Endodontics -- 9.10 Biodegradable Materials in Orthodontics. 9.11 Biodegradable Materials in Periodontics -- 9.12 Conclusion -- References -- 10 Biodegradable and Biocompatible Polymeric Materials for Dentistry Applications -- 10.1 Introduction -- 10.2 Polysaccharides -- 10.2.1 Chitosan -- 10.2.2 Cellulose -- 10.2.3 Starch -- 10.2.4 Alginate -- 10.2.5 Hyaluronic Acid (HA) -- 10.3 Proteins -- 10.3.1 Collagen -- 10.3.2 Fibrin -- 10.3.3 Elastin -- 10.3.4 Gelatins -- 10.3.5 Silk -- 10.4 Biopolyesters -- 10.4.1 Poly (Glycolic Acid) (PGA) -- 10.4.2 Poly (Lactic Acid) PLA -- 10.4.3 Poly (Lactide-co-Glycolide) (PLGA) -- 10.4.4 Polycaprolactone -- 10.4.5 Poly (Propylene Fumarate) -- 10.5 Conclusion -- References -- 11 Biodegradable Biomaterials in Bone Tissue Engineering -- 11.1 Introduction -- 11.2 Essential Characteristics and Considerations in Bone Scaffold Design -- 11.3 Fabrication Technologies -- 11.4 Incorporation of Bioactive Molecules During Scaffold Fabrication -- 11.5 Biocompatibility and Interface Between Biodegradation and New Tissue Formation -- 11.6 Biodegradation of Calcium Phosphate Biomaterials -- 11.7 Biodegradation of Polymeric Biomaterials -- 11.8 Importance of Bone Remodeling -- 11.9 Conclusion -- References -- 12 Biodegradable Elastomer -- 12.1 Introduction -- 12.2 Biodegradation Testing -- 12.3 Biodegradable Elastomers: An Overview -- 12.3.1 Preparation Strategies -- 12.3.2 Biodegradation and Erosion -- 12.4 Application of Biodegradable Elastomers -- 12.4.1 Drug Delivery -- 12.4.2 Tissue Engineering -- 12.4.2.1 Neural and Retinal Applications -- 12.4.2.2 Cardiovascular Applications -- 12.4.2.3 Orthopedic Applications -- 12.5 Conclusions and Perspectives -- References -- 13 Biodegradable Implant Materials -- 13.1 Introduction -- 13.2 Medical Implants -- 13.3 Biomaterials -- 13.3.1 Biomaterial Types -- 13.3.1.1 Polymer Biomaterials -- 13.3.1.2 Metallic Biomaterials -- 13.3.1.3 Ceramic Biomaterials. 13.4 Biodegradable Implant Materials -- 13.4.1 Biodegradable Metals -- 13.4.1.1 Magnesium-Based Biodegradable Materials -- 13.4.1.2 Iron-Based Biodegradable Materials -- 13.4.2 Biodegradable Polymers -- 13.4.2.1 Polyesters -- 13.4.2.2 Polycarbonates -- 13.4.2.3 Polyanhydrides -- 13.4.2.4 Poly(ortho esters) -- 13.4.2.5 Poly (propylene fumarate) -- 13.4.2.6 Poly(phosphazenes) -- 13.4.2.7 Polyphosphoesters -- 13.4.2.8 Polyurethanes -- 13.5 Conclusion -- References -- 14 Current Strategies in Pulp and Periodontal Regeneration Using Biodegradable Biomaterials -- 14.1 Introduction -- 14.2 Biodegradable Materials in Dental Pulp Regeneration -- 14.2.1 Collagen-Based Gels -- 14.2.2 Platelet-Rich Plasma -- 14.2.3 Plasma-Rich Fibrin -- 14.2.4 Gelatin -- 14.2.5 Fibrin -- 14.2.6 Alginate -- 14.2.7 Chitosan -- 14.2.8 Amino Acid Polymers -- 14.2.9 Polymers of Lactic Acid -- 14.2.10 Composite Polymer Scaffolds -- 14.3 Biodegradable Biomaterials and Strategies for Tissue Engineering of Periodontium -- 14.4 Coapplication of Auxiliary Agents With Biodegradable Biomaterials for Periodontal Tissue Engineering -- 14.4.1 Stem Cells Applications in Periodontal Regeneration -- 14.4.2 Bioactive Molecules for Periodontal Regeneration -- 14.4.3 Antimicrobial and Anti-Inflammatory Agents for Periodontal Regeneration -- 14.5 Regeneration of Periodontal Tissues Complex Using Biodegradable Biomaterials -- 14.5.1 PDL Regeneration -- 14.5.2 Cementum and Alveolar Bone Regeneration -- 14.5.3 Integrated Regeneration of Periodontal Complex Structures -- 14.6 Recent Advances in Periodontal Regeneration Using Supportive Techniques

During Application of Biodegradable Biomaterials -- 14.6.1 Laser  
Application in Periodontium Regeneration -- 14.6.2 Gene Therapy in  
Periodontal Regeneration -- 14.7 Conclusion and Future Remarks --  
References.  
15 A Review on Health Care Applications of Biopolymers.
