Sommario/riassunto	Cross-border Water Trade: Legal and Interdisciplinary Perspectives is a critical assessment of one of the growing problems faced by the international community — the global water deficit. Cross-border water trade is a solution that generates ethical and economic but also legal challenges. Economic, humanitarian and environmental approaches each highlight different and sometimes conflicting aspects of the international commercialization of water. Finding an equilibrium for all the dimensions required an interdisciplinary path incorporating certain perspectives of natural law. The significance of such theoretical underpinnings is not merely academic but also quite practical, with concrete consequences for the legal status of water and its fitness for international trade.

Sommario/riassunto

This book offers an accessible introduction to the topic of impact evaluation and its practice in development. While the book is geared principally towards development practitioners and policymakers designing prospective impact evaluations, we trust that it will be a valuable resource for students and others interested in using impact evaluation. Prospective impact evaluations should be used selectively to assess whether or not a program has achieved its intended results, or to test alternatives for achieving those results. We consider that more and better impact evaluation will help strengthe
