

1. Record Nr.	UNINA9910598026603321
Titolo	High-Pressure Studies of Crystalline Materials // edited by Daniel Errandonea
Pubbl/distr/stampa	Basel, Switzerland : , : MDPI - Multidisciplinary Digital Publishing Institute, , [2018] ©2018
Descrizione fisica	1 online resource (330 pages)
Disciplina	548.86
Soggetti	Crystals - Thermal properties High pressure chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Preface to "High-Pressure Studies of Crystalline Materials" -- Evolution of Interatomic and Intermolecular Interactions and Polymorphism of Melamine at High Pressure -- The Behavior of the Deformation Vibration of NH <sub>3</sub> in Semi-Organic Crystals under High Pressure Studied by Raman Spectroscopy -- Structural Phase Transition and Compressibility of CaF <sub>2</sub> Nanocrystals under High Pressure -- The Electrical Properties of Tb-Doped CaF <sub>2</sub> Nanoparticles under High Pressure -- The Jahn-Teller Distortion at High Pressure: The Case of Copper Difluoride -- Layered Indium Selenide under High Pressure: A Review -- The Structure of Ferroselite, FeSe <sub>2</sub> , at Pressures up to 46 GPa and Temperatures down to 50 K: A Single-Crystal Micro-Diffraction Analysis -- P-T Phase Diagram of LuFe <sub>2</sub> O <sub>4</sub> -- High-Pressure Elastic, Vibrational and Structural Study of Monazite-Type GdPO <sub>4</sub> from Ab Initio Simulations -- High Pressure Induced Insulator-to-Semimetal Transition through Intersite Charge Transfer in NaMn <sub>7</sub> O <sub>12</sub> -- Copper Delafossites under High Pressure-A Brief Review of XRD and Raman Spectroscopic Studies -- A Brief Review of the Effects of Pressure on Wolframite-Type Oxides -- Unravelling the High-Pressure Behaviour of Dye-Zeolite L Hybrid Materials -- Thermodynamic Picture of Dimer-Mott Organic Superconductors Revealed by Heat Capacity Measurements with External and Chemical Pressure Control -- Effects

of Carrier Doping on the Transport in the Dirac Electron System a-  
(BEDT-TTF)<sub>2</sub>I<sub>3</sub> under High Pressure -- Structural and Electronic  
Properties of (TMTTF)<sub>2</sub>X Salts with Tetrahedral Anions -- Systematics of  
the Third Row Transition Metal Melting: The HCP Metals Rhenium and  
Osmium -- Pressure-Induced Transformation of Graphite and Diamond  
to Onions -- High-Pressure, High-Temperature Behavior of Silicon  
Carbide: A Review -- High-Pressure Synthesis, Structure, and Magnetic  
Properties of Ge-Substituted Filled Skutterudite Compounds;  
Ln<sub>x</sub>Co<sub>4</sub>Sb<sub>12-y</sub>Ge<sub>y</sub>, Ln = La, Ce, Pr, and Nd.

---

Sommario/riassunto

This book is a printed edition of the Special Issue of Crystals : High-  
Pressure Studies of Crystalline Materials. It also includes additional  
articles published in Crystals and related to the topic of the Special  
Issue, which have been selected based upon their relevance and  
scientific quality.
