Sommario/riassunto

"Contestations of Citizenship, Education, and Democracy in an Era of Global Change: Children and Youth in Diverse International Contexts considers the shifting social, political, economic, and educational structures shaping contemporary experiences, understandings, and practices of citizenship among children and youth in diverse international contexts. As such, this edited volume examines the meaning of citizenship in an era defined by monumental global change. Chapters from across both the Global South and Global North consider emerging formations of citizenship and citizen identities among children and youth in formal and non-formal education contexts, as well as the social and civic imaginaries and practices to which children and youth engage, both in and outside of schools. Rich empirical contributions from an international team of contributors call attention to the social, political, economic, and educational structures shaping the ways young people view citizenship and highlight the social and political agency of children and youth amidst increasing issues of polarization, climate change, conflict, migration, extremism, and authoritarianism. The volume ultimately identifies emergent forms of citizenship developing in formal and non-formal educational contexts, including those that unsettle the nation-state and democracy. Edited by a team of academics with backgrounds in education, citizenship, and youth studies, this book will appeal to scholars, researchers, and faculty who work across the broader field of youth civic engagement and democracy, well as international and comparative education and citizenship"

Sommario/riassunto	This is the first book devoted exclusively to the outphasing power amplifier, covering the most recent research results on important aspects in practical design and applications. A compilation of all the proposed outphasing approaches, this is an important resource for engineers designing base station and mobile handset amplifiers, engineering managers and program managers supervising power amplifier designs, and R & D personnel in industry. The work enables you to: design microwave power amplifiers with higher efficiency and improved linearity at a lower cost; understand linearity and performance tradeoffs in microwave power amplifiers; and understand the effect of new modulation techniques on microwave power amplifiers.
