1. Record Nr. UNINA9910619466103321 Autore Cimpoesu Nicanor Titolo Active Materials for Medical Applications MDPI - Multidisciplinary Digital Publishing Institute, 2022 Pubbl/distr/stampa **ISBN** 3-0365-5268-5 Descrizione fisica 1 online resource (158 p.) Soggetti History of engineering and technology Materials science Technology: general issues Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia This Special Issue was proposed by and for engineers, physicists, Sommario/riassunto medical doctors, researchers and scientists. We intend to analyze and discuss different topics on special materials for medical applications. There is great potential in the application of active or smart materials (metallic, polymer or ceramic) for the progression of applications in the medical domain of MEMS, actuators, sensors or functional systems. Active or "smart" materials have the ability to respond to different physical or chemical stimuli in a specific, repeatable mode. The actual activity in the domain, however, presents problems connected to obtaining, processing, characterizing, modeling and simulating or prototyping technologies. This Special Issue focuses on the most recent

advances in obtaining and thermal and mechanical processing active materials used in the medical field with enhanced performances.
