

1. Record Nr.	UNINA9910623984103321
Autore	Wang Liuping
Titolo	State Feedback Control and Kalman Filtering with MATLAB/Simulink Tutorials
Pubbl/distr/stampa	Newark : , : John Wiley & Sons, Incorporated, , 2022 ©2023
ISBN	1-119-69462-0 1-119-69464-7
Descrizione fisica	1 online resource (451 pages)
Collana	IEEE Press Ser.
Altri autori (Persone)	GuanRobin Ping
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Author Biography -- Preface -- Acknowledgments -- List of Symbols and Acronyms -- About the Companion Website -- Part I Continuoustime State Feedback Control -- Chapter 1 State Feedback Controller and Observer Design -- 1.1 Introduction -- 1.2 Motivation for Going Beyond PID Control -- 1.3 Basics in State Feedback Control -- 1.3.1 State Feedback Control -- 1.3.2 Controllability -- 1.3.3 Food for Thought -- 1.4 Pole assignment Controller -- 1.4.1 The Design Method -- 1.4.2 Similarity Transformation for Controller Design -- 1.4.3 MATLAB Tutorial on Pole assignment Controller -- 1.4.4 Food for Thought -- 1.5 Linear Quadratic Regulator (LQR) Design -- 1.5.1 Motivational Example -- 1.5.2 Linear Quadratic Regulator Design -- 1.5.3 Selection of Q and R Matrices -- 1.5.4 LQR with Prescribed Degree of Stability -- 1.5.5 Food for Thought -- 1.6 Observer Design -- 1.6.1 Motivational Example for Observer -- 1.6.2 Observer Design -- 1.6.3 Observability -- 1.6.4 Duality between Controller and Observer -- 1.6.5 Observer Implementation -- 1.6.6 Food for Thought -- 1.7 State Estimate Feedback Control System -- 1.7.1 State Estimate Feedback Control -- 1.7.2 Separation Principle -- 1.7.3 Food for Thought -- 1.8 Summary -- 1.9 Further Reading -- Problems -- Chapter 2 Practical Multivariable Controllers in Continuoustime -- 2.1 Introduction -- 2.2 Practical Controller I: Integral Action via Controller Design -- 2.2.1 The Original

Control Law -- 2.2.2 Integrator Windup Scenarios -- 2.2.3 Proposed Practical Multivariable Controller -- 2.2.4 Antiwindup Implementation -- 2.2.5 MATLAB Tutorial on Design and Implementation -- 2.2.6 Application to Drum Boiler Control -- 2.2.7 Food for Thought -- 2.3 Practical Controller II: Integral Action via Observer Design -- 2.3.1 Integral Control via Disturbance Estimation. 2.3.2 Antiwindup Mechanism -- 2.3.3 MATLAB Tutorial on Design and Implementation -- 2.3.4 Application to Sugar Mill Control -- 2.3.5 Design for Systems with Known States -- 2.3.6 Food for Thought -- 2.4 Drive Train Control of a Wind Turbine -- 2.4.1 Modelling of Wind Turbine's Drive Train -- 2.4.2 Configuration of The Control System -- 2.4.3 Design Method I -- 2.4.4 Design Method II -- 2.4.5 MATLAB Tutorial on Design Method II -- 2.4.6 Food for Thought -- 2.5 Summary -- 2.6 Further Reading -- Problems -- Part II Discretetime State Feedback Control -- Chapter 3 Introduction to Discretetime Systems -- 3.1 Introduction -- 3.2 Discretization of Continuoustime Models -- 3.2.1 Sampling of a Continuoustime Model -- 3.2.2 Stability of Discretetime System -- 3.2.3 Examples of Discretetime Models from Sampling -- 3.2.4 Food for Thoughts -- 3.3 Input and Output Discretetime Models -- 3.3.1 Input and Output Models -- 3.3.2 Finite Impulse Response and Step Response Models -- 3.3.3 Nonminimal State Space Realization -- 3.3.4 Food for Thought -- 3.4 zTransforms -- 3.4.1 zTransforms for Commonly Used Signals -- 3.4.2 zTransfer Functions -- 3.4.3 Food for Thought -- 3.5 Summary -- 3.6 Further Reading -- Problems -- Chapter 4 Discretetime State Feedback Control -- 4.1 Introduction -- 4.2 Discretetime State Feedback Control -- 4.2.1 Basic Ideas -- 4.2.2 Controllability in Discretetime -- 4.2.3 Food for Thought -- 4.3 Discretetime Observer Design -- 4.3.1 Basic Ideas about Discretetime Observer -- 4.3.2 Observability in Discrete time -- 4.3.3 Food for Thought -- 4.4 Discretetime Linear Quadratic Regulator (DLQR) -- 4.4.1 Objective Function for DLQR -- 4.4.2 Optimal Solution -- 4.4.3 Observer Design using DLQR -- 4.4.4 Food for Thought -- 4.5 Discretetime LQR with Prescribed Degree of Stability. 4.5.1 Basic Ideas about a Prescribed Degree of Stability -- 4.5.2 Case Studies -- 4.5.3 Food for Thought -- 4.6 Summary -- 4.7 Further Reading -- Problems -- Chapter 5 Disturbance Rejection and Reference Tracking via Observer Design -- 5.1 Introduction -- 5.2 Disturbance Models -- 5.2.1 Commonly Encountered Disturbance Signals -- 5.2.2 State Space Model with Input Disturbance -- 5.2.3 Food for Thought -- 5.3 Compensation of Input and Output Disturbances in Estimation -- 5.3.1 Motivational Example -- 5.3.2 Input Disturbance Observer Design -- 5.3.3 MATLAB Tutorial for Augmented State Space Model -- 5.3.4 The Observer Error System -- 5.3.5 Output Disturbance Observer Design -- 5.3.6 Food for Thought -- 5.4 DisturbanceObserverbased State Feedback Control -- 5.4.1 The Control Law -- 5.4.2 MATLAB Tutorial for Control Implementation -- 5.4.3 Food for Thought -- 5.5 Analysis of DisturbanceObserverbased Control System -- 5.5.1 Controller Transfer Function -- 5.5.2 Disturbance Rejection -- 5.5.3 Reference Tracking -- 5.5.4 A Case Study -- 5.5.5 Food for Thought -- 5.6 Antiwindup Implementation of the Control Law -- 5.6.1 Algorithm for Antiwindup Implementation -- 5.6.2 Heating Furnace Control -- 5.6.3 Example for Bandlimited Disturbance -- 5.6.4 Food for Thought -- 5.7 Summary -- 5.8 Further Reading -- Problems -- Chapter 6 Disturbance Rejection and Reference Tracking via Control Design -- 6.1 Introduction -- 6.2 Embedding Disturbance Model into Controller Design -- 6.2.1 Formulation of Augmented State Space Model -- 6.2.2 MATLAB Tutorial -- 6.2.3 Controllability and Observability -- 6.2.4

Food for Thought -- 6.3 Controller and Observer Design -- 6.3.1
Controller Design and Control Signal Calculation -- 6.3.2 Adding
Reference Signal -- 6.3.3 Observer Design and Implementation --
6.3.4 MATLAB Tutorial for Control Implementation -- 6.3.5 Food for
Thought.
6.4 Practical Issues -- 6.4.1 Reducing Overshoot in Reference Tracking
-- 6.4.2 Antiwindup Implementation -- 6.4.3 Control System using
NMSS Realization -- 6.4.4 Food for Thought -- 6.5 Repetitive Control
-- 6.5.1 Basic Ideas about Repetitive Control -- 6.5.2 Determining the
Disturbance Model $D(z)$ -- 6.5.3 Robotic Arm Control -- 6.5.4 Food for
Thought -- 6.6 Summary -- 6.7 Further Reading -- Problems -- Part III
Kalman Filtering -- Chapter 7 The Kalman Filter -- 7.1 Introduction --
7.2 The Kalman Filter Algorithm -- 7.2.1 State Space Models in the
Kalman Filter -- 7.2.2 An Intuitive Computational Procedure -- 7.2.3
Optimization of Kalman Filter Gain -- 7.2.4 Kalman Filter Examples
with MATLAB Tutorials -- 7.2.5 Compensation of Sensor Bias and Load
Disturbance -- 7.2.6 Food for Thought -- 7.3 The Kalman Filter in
Multirate Sampling Environment -- 7.3.1 KF Algorithm for Missing
Data Scenarios -- 7.3.2 Case Studies with MATLAB Tutorial -- 7.3.3
Food for Thought -- 7.4 The Extended Kalman Filter (EKF) -- 7.4.1
Linearization in Extended Kalman Filter -- 7.4.2 The Extended Kalman
Filter Algorithm -- 7.4.3 Case Studies with MATLAB Tutorial -- 7.4.4
Food for Thought -- 7.5 The Kalman Filter with Fading Memory --
7.5.1 The Algorithm for KF with Fading Memory -- 7.5.2 Food for
Thought -- 7.6 Relationship between Kalman Filter and Observer --
7.6.1 Onestep Kalman Filter Algorithm -- 7.6.2 Kalman Filter and
Observer -- 7.6.3 Food for Thought -- 7.7 Summary -- 7.8 Further
Reading -- Problems -- Chapter 8 Addressing Computational Issues in
KF -- 8.1 Introduction -- 8.2 The Sequential Kalman Filter -- 8.2.1
Basic Ideas about Sequential Kalman Filter -- 8.2.2 Nondiagonal R --
8.2.3 MATLAB Tutorial for Sequential Kalman Filter -- 8.2.4 Food for
Thought -- 8.3 The Kalman Filter using UDUT Factorization -- 8.3.1
GramSchmidt Orthogonalization Procedure.
8.3.2 Basic Ideas -- 8.3.3 Sequential Kalman Filter with UDUT
Decomposition -- 8.3.4 MATLAB Tutorial -- 8.3.5 Food for Thought --
8.4 Summary -- 8.5 Further Reading -- Problems -- Bibliography --
Index -- EULA.
