Sommario/riassunto	Clinical practice guidelines were initially developed within the context of evidence-based medicine with the goal of putting medical research findings into practice. However, physicians do not always follow them, even when they seem to apply to the particular patient they have to treat. This phenomenon, known as clinical inertia, represents a

significant obstacle to the efficiency of care and a major public health problem, the extent of which is demonstrated in this book. An analysis of its causes shows that it stems from a discrepancy between the objective, essentially statistical nature of evidence-based medicine on the one hand and the physician's own complex, subjective view (referred to here as "medical reason") on the other. This book proposes a critique of medical reason that may help to reconcile the principles of evidence-based medicine and individual practice. The author is a diabetologist and Professor of Endocrinology, Diabetology and Metabolic Diseases at Paris 13 University. He has authored several books, including one to be published by Springer (Philosophy and Medicine series) under the title: The Mental Mechanisms of Patient Adherence to Long Term Therapies, Mind and Care.

Sommario/riassunto

This open access book examines the conversations around gendered mental health in contemporary Western media culture. While early 21st century-media was marked by a distinct focus on happiness, productivity and success, during the 2010s negative feelings and discussions around mental health have become increasingly common in that same media landscape. This book traces this turn to sadness in women's media culture and shows that it emerged indirectly as a result of a culture overtly focused on happiness. By tracing the coverage of mental health issues in magazines, among female celebrities, and on social media this book shows how an increasingly intimate media environment has made way for a profitable vulnerability, that takes the shape of marketable and brand-friendly mental illness awareness that strengthens the authenticity of those who embrace it. But at the same time sad girl cultures are proliferating on social media platforms, creating radically honest spaces where those who suffer get support, and more capacious ways of feeling bad are formed. Using discourse analysis and digital ethnography to study contemporary representations of mental illness and sadness in Western popular media and social media, this book takes a feminist media studies approach to popular discourse, understanding the conversations happening around mental health in these sites to function as scripts for how to think about and experience mental illness and sadness. Fredrika Thelandersson is Postdoctoral Research Fellow in the Department of Communication and Media at Lund University. She obtained her PhD from Rutgers University. She has had chapters published in *The International Encyclopedia of Gender, Media and Communication*, and articles published in *Feminist Media Studies* and *Capacious: Journal for Emerging Affect Inquiry*.
