[et al.].
Sommario/riassunto	This book presents major challenges and opportunities facing agriculture sectors in the wake of the transition from a planned to market economy. Using Albania as a case study, it examines the shift from communism to free markets and the lasting effects of such

change on agricultural production and education. Using primary research sources to give readers an accurate portrayal of the path that lies ahead for many developing countries, the book also looks at the future of agriculture in transitioning economies.
