1. Record Nr.   UNINA9910631077903321

   Autore   Sabharwal Navin

   Titolo   Workload Automation Using HWA : With Architecture and Deployment
                      Options / / by Navin Sabharwal, Subramani Kasiviswanathan

   Pubbl/distr/stampa Berkeley, CA : , : Apress : , : Imprint : Apress, , 2023

   ISBN   9781484288856
                      1484288858

   Edizione   [1st ed. 2023.]

   Descrizione fisica 1 online resource (239 pages)

   Disciplina   670.427

   Soggetti   Cloud computing
                      Automation
                      Computer science
                      Cloud Computing
                      Computer Science

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Note generali   Includes index.

   Nota di contenuto Ch1: Introduction to Workload Automation -- Ch 2: HCL Workload
                      Automation Architecture -- Ch 3: HCL Workload Automation
                      Deployments -- Ch 4: Workload Design and Monitoring using DWC and
                      CLI -- Ch 5: Use Case: HWA for Managed File Transfers -- Ch 6: Use
                      Case: HWA integration with SAP -- Ch 7: Use Case: Automate Job
                      Executions on Microsoft SQL server -- Ch 8: Use Case: Working with
                      RESTful Web Services -- Ch 9: Use Case: Submit, orchestrate and
                      monitor jobs on a Kubernetes cluster -- Ch 10: Use Case: HWA
                      Integration with Hadoop Distributed File System.-Ch 11: Use Case: HWA
                      Integration with Apache Spark -- Ch 12: HWA Integration with
                      ServiceNow.-Ch 13: Tool Administration and best practices- Ch 14:
                      Alerting and Troubleshooting issues -- Ch 15: HWA Reporting -- Ch
                      16: HWA Security.-Ch 17: HWA tuning for best performance -- Ch 18:
                      Alignment of HWA with DevSecOps Delivery model.

   Sommario/riassunto Apply best practices for deploying and administering HCL Workload
                      automation (HWA) to meet the automation requirements of the digitally
                      transformed platform. This book will provide detailed architecture and
                      deployment options to achieve this goal. Workload automation focuses

on real-time processing, predefined event-driven triggers, and situational dependencies. It offers centralized control of managing multiple tasks, making it possible to schedule enterprise-wide tasks. You'll see how it supports the timely completion of tasks and is beneficial for processes that need to happen at a specific time or need to occur as a result of another event. HWA increases efficiency, reduces the turnaround time for workflows, and reduces errors along with delays in end-to-end processes. You'll review proven ways to deliver batch optimization and modernization requirements, and see how solutions can be aligned with the DevSecOps delivery model. Workload Automation Using HWA presents information on how to use the tool and has numerous use cases and implementation procedures to guide every workload automation deployment requirement. You will: Automate and integrate your complex workload, workflow, and business processes across automation platforms, ERP systems, and business applications Understand event-driven batch automation Practice alignment of the workload automation solution with the DevSecOps principles.
