

1. Record Nr.	UNINA9910631087103321
Autore	Ji Xia
Titolo	Minimum quantity lubrication machining : process analysis and analytical modeling // Xia Ji
Pubbl/distr/stampa	Singapore : , : Springer, , [2023] ©2023
ISBN	9789811970870 9789811970863
Descrizione fisica	1 online resource (137 pages)
Disciplina	621.89
Soggetti	Lubrication and lubricants Lubrication and lubricants - Analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Foreword -- Preface -- Contents -- About the Editor -- 1 Introduction -- 1.1 Background -- 1.2 Literature Review of Machining Induced Residual Stress -- 1.2.1 Experimental Efforts in Residual Stress -- 1.2.2 Finite Element Research of the Residual Stress -- 1.2.3 Analytical Modeling of Residual Stress -- 1.3 Literature Review of Minimum Quantity Lubrication Machining -- 1.3.1 Literature Review of MQL Experimental Investigation -- 1.3.2 Literature Review of MQL Analytical Modeling -- 1.4 Motivation of the Research -- 1.5 Arrangement of Chapter -- References -- 2 The Effects of MQL on Tribological Attributes in Machining -- 2.1 Penetration Mechanism of Cutting Medium -- 2.1.1 Penetration Mechanism of Convective Flood Cooling Machining -- 2.1.2 Penetration Mechanism of MQL Machining -- 2.2 Lubrication Effect of MQL -- 2.2.1 Lubrication Mechanism of MQL -- 2.2.2 Friction Coefficient in MQL -- 2.3 Cooling Effect of MQL -- 2.3.1 Cooling Mechanism of MQL -- 2.3.2 Heat Transfer Coefficient in MQL -- 2.4 Summary -- References -- 3 Force-Temperature Coupled Prediction Model -- 3.1 Predictive Modeling of Cutting Force Based on Orthogonal Cutting -- 3.1.1 Chip Formation Force Model -- 3.1.2 Plowing Force Model -- 3.2 Predictive Modeling of Cutting Temperature -- 3.2.1 Temperature Model in Workpiece -- 3.2.2 Temperature Model in Chip -- 3.2.3 Temperature Model in Tool

-- 3.3 Force-Temperature Coupled Model -- 3.3.1 Modified Oxley's Predictive Model -- 3.3.2 Iterative Coupling Model of Cutting Force and Cutting Temperature -- 3.4 Comparison of Cutting Force Prediction Models -- 3.4.1 Comparison of Model Inputs and Application Scope -- 3.4.2 Comparison of Predicted Cutting Force -- 3.5 Summary -- References -- 4 Residual Stress Model in MQL Machining -- 4.1 Prediction of Stress Distribution -- 4.1.1 Stress Due to Mechanical Load. 4.1.2 Stress Due to Thermal Load -- 4.1.3 Stress Analysis -- 4.2 Residual Stress Prediction Model -- 4.2.1 Model Criteria -- 4.2.2 Load History -- 4.2.3 Relax Process -- 4.3 Comparison of Residual Stress Prediction Models -- 4.3.1 Comparison of Assumption of Two Prediction Models -- 4.3.2 Comparison of Results of the Prediction Models -- 4.4 Summary -- References -- 5 Experimental Validation by Orthogonal Cutting of AISI 4130 Alloy -- 5.1 Experimental Method -- 5.1.1 Design of the Workpiece -- 5.1.2 Design of the Setup -- 5.1.3 Design of the Measurement -- 5.2 Analysis of Experimental Results and Model Verification -- 5.2.1 Determination of the Parameter in the Prediction Model -- 5.2.2 Validation of Cutting Force -- 5.2.3 Validation of Cutting Temperature -- 5.2.4 Validation of Residual Stress Prediction Model -- 5.3 Summary -- References -- 6 Sensitivity Analysis of Machined Residual Stress in MQL Machining -- 6.1 Selection of the Parameters -- 6.2 Influence of MQL Parameters -- 6.2.1 Influence of Boundary Lubrication Film Thickness -- 6.2.2 Influence of Air-Oil Mixture Ratio -- 6.3 Influence of Cutting Parameters -- 6.3.1 Influence of Cutting Speed -- 6.3.2 Influence of Feed Rate -- 6.3.3 Influence of Cutting Width -- 6.4 Influence of Tool Parameters -- 6.4.1 Influence of Tool Rake Angle -- 6.4.2 Influence of Tool Edge Radius -- 6.5 Summary.
