

1. Record Nr.	UNINA9910632999103321
Autore	Avellana Narcis
Titolo	IURBAN : intelligent urban energy tool / / editors, Narcis Avellana, Alberto Fernandez
Pubbl/distr/stampa	Taylor & Francis, 2017 Alsbjergvej, Gistrup, Denmark ; ; Delft, The Netherlands : , : River Publishers, , 2017 ©2017
ISBN	1-00-333872-0 1-003-33872-0 1-000-79366-4 87-93519-09-5
Edizione	[1st ed.]
Descrizione fisica	1 online resource (224 pages) : illustrations (some color), tables
Collana	River Publishers Series in Renewable Energy
Disciplina	302.2
Soggetti	Communication - Technological innovations Communication - Technological innovations - Economic aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Sommario/riassunto	iURBAN: Intelligent Urban Energy Tool introduces an urban energy tool integrating different ICT energy management systems (both hardware and software) in two European cities, providing useful data to a novel decision support system that makes available the necessary parameters for the generation and further operation of associated business models. The business models contribute at a global level to efficiently manage and distribute the energy produced and consumed at a local level (city or neighbourhood), incorporating behavioural aspects of the users into the software platform and in general prosumers. iURBAN integrates a smart Decision Support System (smartDSS) that collects real-time or near real-time data, aggregates, analyses and suggest actions of energy consumption and production from different buildings, renewable energy production resources, combined heat and power plants, electric vehicles (EV) charge stations, storage systems,

sensors and actuators. The consumption and production data is collected via a heterogeneous data communication protocols and networks. The iURBAN smartDSS through a Local Decision Support System allows the citizens to analyse the consumptions and productions that they are generating, receive information about CO2 savings, advises in demand response and the possibility to participate actively in the energy market. Whilst, through a Centralised Decision Support System allow to utilities, ESCOs, municipalities or other authorised third parties to: Get a continuous snapshot of city energy consumption and productionManage energy consumption and productionForecasting of energy consumptionPlanning of new energy "producers" for the future needs of the cityVisualise, analyse and take decisions of all the end points that are consuming or producing energy in a city level, permitting them to forecast and planning renewable power generation available in the city.
