

1. Record Nr.	UNINA9910634051103321
Titolo	Microbial bioremediation : sustainable management of environmental contamination // edited by Rouf Ahmad Bhat [and three others]
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2023] ©2023
ISBN	3-031-18017-8
Descrizione fisica	1 online resource (313 pages)
Disciplina	660.62
Soggetti	Microbial biotechnology Bioremediation
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Foreword -- Preface -- About the Book -- Key Features -- Contents -- About the Editors -- A Diverse Array of Microbial Taxa Affiliated in Bioremediation to Counteract Environmental Pollution -- 1 Introduction -- 2 Principle of Bioremediation -- 2.1 Types of Bioremediations -- 2.1.1 In Situ Bioremediation -- 2.1.2 Ex Situ Bioremediation -- 3 Mechanism of Microorganism for Bioremediation -- 4 Different Types of Pollutants -- 5 Group of Microorganisms Employed in Bioremediation -- 5.1 Bioremediation by Bacteria -- 5.2 Bioremediation by Fungi -- 5.3 Bioremediation by Algae -- 6 Genetically Engineered Microorganisms (GEMS) in Bioremediation -- 7 Conclusion -- References -- Aerobic Processes: Best Approach for the Treatment of Wheat Starch Effluents -- 1 Introduction -- 2 Industrial Production of Starch -- 3 Treatment Processes -- 3.1 Martin Process -- 3.2 Biodegradation of Starch Stillage -- 3.3 Methods of Stillage Utilization -- 4 Biodegradation of Starch Stillage -- 5 Conclusion -- References -- Banned Pesticides with High Persistence: The Impact of Their Use in Agriculture and Their Removal by Microbial Biodegradation -- 1 Introduction -- 2 Pesticide Production and Use in Agriculture -- 3 Spreading of Banned Pesticides with High Persistence in Soil, Water, Air, and Food -- 4 Banned Pesticides with High Persistence Impacts on the Environment and Living Organisms -- 5 Microbial Biodegradation of Banned Pesticides

with High Persistence -- 6 Conclusions -- References --  
Bioremediations for Oil Spills by Utilizing Microbes -- 1 Introduction --  
2 Petroleum -- 3 Components That Influence Petroleum Hydrocarbon  
Degradation -- 4 Mode of Action of Petroleum Hydrocarbon  
Degradation -- 5 Bioremediation -- 6 Types of Bioremediation -- 7  
Different Bioremediation Methods to Cure Oil Spills -- 8 Bacterial  
Bioremediation -- 9 Mycoremediation.  
10 Phytoremediation -- 11 Use of Genetically Modified Bacteria  
for Bioremediation -- 12 Conclusion -- References -- Genetically  
Engineered Microorganisms for Bioremediation Processes -- 1  
Introduction -- 2 Advancement and Implication of Genetically  
Engineered Microorganisms in Bioremediation -- 2.1 Gene Transfer  
Strategies -- 2.2 Variations of Genes That Encode Biodegradative  
Enzymes -- 3 Stability and Survivability of Genetically Engineered  
Microorganism and Genetic Transmission to Bacteria -- 4 Survivability  
of Genetically Engineered Microorganisms -- 4.1 Acquisition  
and Structural Fragility of Recombinant DNA -- 4.2 Effect of Genetically  
Engineered Microorganisms on Microbiota -- 4.3 Horizontal Transfer  
of DNA in Bacteria -- 4.4 Effects of Horizontal Recombinant DNA  
Transfer as Well as Other Heterologous Species on Native Flora -- 5  
Suicidal Genetically Engineered Microorganisms -- 6 Bacterial Plasmid  
Addiction System -- 7 Techniques for Tracking GEMs -- 7.1 PCR-Based  
Techniques -- 7.2 Fluorescent-Based DNA Hybridization Technique --  
7.3 Bioluminescence-Mediated Technique -- 7.4 DNA Microarray  
Technique -- 8 Molecular Techniques for Generating Genetically  
Modified Microorganisms for Bioremediation -- 8.1 Molecular Cloning  
-- 8.2 Electroporation -- 8.3 Protoplast Transfusion -- 8.4 Biolistic  
Transformation -- 9 Obstacles Associated with Use of GEMs  
in Bioremediation -- 10 Advantages and Disadvantages of GEMs --  
10.1 Advantages -- 10.2 Disadvantages -- 11 Conclusion and Future  
Aspects -- References -- Microbial Modifications and Biochemical  
Pathway: Mechanism for Ecosystem Decontamination -- 1 Introduction  
-- 2 Basic Principle of Bioremediation -- 3 Types of Bioremediations --  
4 The Potential of a Genetically Engineered Microbe for Bioremediation  
-- 5 Factors Affecting Microbial Bioremediation -- 6 GEM: A Tool  
to Sense Ion Explosive Residues.  
6.1 Bioreporters for the Detection of Explosives -- 6.1.1 Bacteria -- 6.2  
Yeast -- 6.3 Microalgae -- 7 Disadvantages Accrued by GEMs  
in the Bioremediation Process -- 8 Bioprocess Monitoring and Control  
-- 9 Conclusion and Future Perspectives -- References -- Innovative  
Biofilms Mediated as Empiricist of Bioremediation for Sustainable  
Development -- 1 Introduction -- 2 Microbial Biofilms  
and Bioremediation -- 2.1 Biofilms -- 2.2 Biofilm Development -- 2.3  
Components of Biofilms -- 2.4 Biofilm's Physiological State -- 2.5  
Quorum Sensing -- 3 Biofilm Mechanisms Involved in Bioremediation  
-- 4 Miscellaneous Pollutants Remediated by Biofilms -- 5  
Environmental Pollutants and Bioremediation -- 6 Application of Biofilm  
in Bioremediation -- 6.1 Chemotaxis Significance in Biofilm Formation  
and Biodegradation -- 6.2 Potential of Biofilms in Remediation  
of Hydrocarbons -- 7 Current Status of Use of Biofilm in Bioremediation  
-- 8 Conclusion and Future Perspective -- References -- Major Groups  
of Microorganisms Employed in Bioremediation -- 1 Introduction -- 2  
Bioremediation Management Technique and Bioremediation Agents --  
2.1 Bioremediation Management Technique -- 2.2 Bioremediation  
Agents -- 2.2.1 Fungi Used in Bioremediation -- 2.2.2  
Mycoremediation -- 2.2.3 Fungus (Mycoremediation) -- 2.2.4  
Biodegradability of White Rot Fungi -- 3 Factors Affecting Microbial  
Bioremediation -- 3.1 Biological Factors -- 3.2 Environmental Factors

-- 3.2.1 Temperature -- 3.2.2 Oxygen Concentration -- 3.2.3 pH --  
3.2.4 Moisture Content -- 3.2.5 Metal Ion -- 3.2.6 Nutrient Availability  
-- 3.2.7 Toxic Compound -- 4 Environmental Applications -- 4.1  
Bacteria -- 4.1.1 *Pseudomonas putida* -- 4.1.2 *Dechloromonas* -- 4.1.3  
*Dechloromonas aromatica* -- 4.1.4 *Deinococcus radiodurans* -- 4.2  
Fungi -- 4.2.1 *Methylibium petroleiphilum* -- 4.2.2 *Alcanivorax*  
*borkumensis*.  
4.2.3 *Phanerochaete chrysosporium* -- 4.3 Archaea -- 5 Advantage  
and Disadvantage of Current Bioremediation -- 5.1 Advantage  
of Current Bioremediation -- 5.2 Disadvantage of Current  
Bioremediation -- 6 Conclusion and Remarks -- References --  
Microbial Exploration and Their Metabolic Capacity for Detoxification  
and Restoration of Natural Ecosystems -- 1 Introduction -- 2  
Biostimulation -- 3 Bioattenuation -- 4 Bioaugmentation -- 5  
Bioslurping -- 6 Genetically Engineered Microorganisms (GEMS) -- 7  
Bioventing -- 8 Biopiles -- References -- Microbes in Restoration  
of Polluted Ecosystems -- 1 Introduction -- 1.1 Why Polluted  
Ecosystems Are Considered a Threat? -- 1.2 Living Beings Performing  
Remediation: Bioremediation -- 2 Microbes Restoring Polluted  
Ecosystems -- 3 Microbes Assisting Bioremediation Promoted by Plants  
-- 4 Engineered Microbes Restoring Polluted Ecosystems -- 5  
Recovering Soil Microbial Community to Promote Ecosystems  
Restoration -- 6 Conclusions -- 7 Future Perspectives -- References --  
Microbial Biotechnology: Energy Generation Approach  
from the Environmental Waste -- 1 Introduction -- 2 Landfill Gas:  
Production, Properties, and Sustainability -- 2.1 Microbial Production  
of Biogas -- 2.2 Biogas and Landfill Gas Energy Properties -- 2.3 The  
Sustainability Aspects of Recovering Landfill Gas for Energy Use -- 3  
Landfill Gas Capturing and Usage: General Process Description -- 4  
Landfill Gas Quantification Models -- 5 Landfill Gas Extraction  
and Collection -- 6 Landfill Gas Purification Technologies -- 6.1  
Moisture and Particulates Removal -- 6.2 Hydrogen Sulfide Removal --  
6.3 Siloxanes Removal -- 6.4 Carbon Dioxide Removal -- 7 Potential  
Landfill Gas Utilization -- 8 Costing and Financing of Landfill Gas  
Recovery Projects -- 8.1 Capital and Operating Costs -- 8.2 Revenue  
Calculations -- 8.3 Economic Feasibility Study.  
8.4 Selecting the Best Design -- 8.5 Choosing the Financing Option --  
9 Decisions on Decommissioning -- 10 Concluding Remarks  
and Future Considerations -- References -- Microbial Degradation  
of Industrial Pollutants from Different Environments -- 1 Introduction  
-- 2 Application of Microbes in Treating Wastewater from Various  
Industries -- 2.1 Bacteria -- 2.1.1 Types of Bacteria -- 2.2 Filamentous  
Bacteria -- 2.3 Metazoa -- 2.4 Protozoa -- 3 Wastewater Treatment  
Techniques -- 3.1 Factors That Affect Bioremediation -- 3.2 The  
Treatment Methodology -- 4 Role of Microbes to Degrade Petroleum  
Hydrocarbons Contaminant -- 4.1 Degradation of Petroleum Pollutants  
by Microbial Mechanisms -- 4.2 Main Principles of Microbial Degradation  
of Petroleum Hydrocarbons in the Atmosphere -- 4.2.1 pH -- 4.2.2  
Temperature -- 4.2.3 Oxygen -- 4.2.4 Nutrients -- 4.2.5 Salinity --  
4.2.6 Activity of Water -- 4.2.7 Microbial Community -- 4.2.8  
Bioavailability -- 4.2.9 Toxicity -- 5 Influence of Enzymes in Petroleum  
Hydrocarbon Degradation -- 6 Role of Microbial Degradation  
for Chemical Release -- 7 Role of DDT Microbial Degradation and Their  
Residues -- 8 Role of Microbial Degradation of Pesticide Residues --  
8.1 Types of Pesticides -- 8.2 Mechanism of Microbial Degradation  
of Pesticide Residues -- 8.3 Factors Affecting the Microbial  
Degradation of Pesticide Residues -- 8.4 Microbial Species, Metabolic  
Activity, and Adaptability Directly Influence Pesticide Degradation

and Transformation -- 8.5 Pesticide Structure -- 8.6 Environmental Factors -- 9 Conclusion -- References -- Microbial Enzymes and Their Importance in the Environmental Decontamination -- 1 Introduction -- 2 Enzymes -- 2.1 Enzyme Nomenclature -- 2.2 Enzyme Classification -- 3 Microbial Enzymes in Environmental Decontamination -- 3.1 Microbial Oxidoreductases -- 3.1.1 Microbial Oxygenase -- 3.1.2 Monooxygenases.  
3.1.3 Microbial Dioxygenases.
