Titolo	Decarbonize Public and Commercial Buildings : China Building Energy and Emission Yearbook 2022 // by Yi Jiang, Shan Hu, Xiaohua Liu, Tao Zhang, Qingpeng Wei
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2023
ISBN	981-19-5526-3
Edizione	[1st ed. 2023.]
Descrizione fisica	1 online resource (122 pages)
Collana	Engineering Series
Disciplina	696
Soggetti	Sustainable architecture Energy policy Sustainable Architecture/Green Buildings Energy Policy, Economics and Management
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- China's building energy use and GHG emissions -- Energy and emissions of public and commercial buildings -- Decarbonize public and commercial buildings.
Sommario/riassunto	One of the key motivations and goals for China's social and economic development is the dual carbon target. Building is one of the most important sectors to reduce emissions and save energy, accounting for more than 20% of China's primary energy consumption and carbon emissions. This book analyzes the energy consumption of China's buildings sector in four categories, their characteristics and technologies to improve energy efficiency, and examines the greenhouse gas emissions of China's buildings, including building construction embodied emission and building operation emissions. In particular, this book discusses the ways to achieve carbon neutrality targets for China's public and commercial building sectors. This book also analyzes the energy mix, energy intensity, and technological prospects for achieving energy and carbon targets in the public and commercial building sectors. This book contains a large amount of survey data, monitoring data, and case studies. The debate on technologies and policies is underpinned by a variety of evidence and

research that has been ongoing for more than a decade. The information, data, and policy recommendations will be of interest to a national and international audience working in the fields of energy, climate change, engineering, and building science. .
