Sommario/riassunto	This book presents an analysis of forest politics that employs a broader scope to include non-institutionalized actors. It offers a comparative perspective on various environmental social movements fighting to protect forests around the globe, including indigenous communities in the Amazon and eco-anarchists in Europe. By examining the political

goals, motives, and tactics of these sometimes-radical environmentalists, it helps readers understand the commonalities and differences among these “grass-roots forest politicians.” In addition, the book highlights the importance of forest-related struggles for a just transition to a carbon-neutral future. Accordingly, it will appeal to scholars of political science, public policy, and political sociology, as well as anyone interested in social movements and forest conservation.
