Sommario/riassunto

“The extraordinary expansion of China’s ties to Latin America marks a turning point in the region’s engagement in the international arena, and this timely volume illuminates the implications across key countries and sub-regions as well as different economic and strategic domains.”
—Eric Hershberg, Professor of Government, American University “This volume not only presents a rich and comprehensive analysis of China-Latin American relations, it also offers important insights into China’s overall economic, foreign policy and geopolitical strategies and limitations as an emerging global power. Required reading for anyone interested in a deep and contextual analysis of China and world order.”
—Amitav Acharya, Distinguished Professor of International Relations, American University “The volume makes an important contribution to the literature on China’s rising power behavior in one of the most important regions of the world. Strongly recommended for anyone who is interested in Chinese foreign policy, great power relations, and regional dynamics in Latin America.” —Suisheng Zhao, Professor, Josef Korbel School of International Studies, University of Denver, and Editor of Journal of Contemporary China This book offers accounts of the ways in which Chinese engagement with Latin America will shape the regional and global order. The historical, sectoral, regional, and national stories told here seek to change the narrative on China-Latin American relations. In particular, the book argues that there is room for cooperation between the US, China, and Latin American nations towards development, peace, and equity. Alessandro Golombiewski Teixeira is Professor of Public Policy at School of Public Policy and Management at Tsinghua University and Professor of International Business at Schwartzman College, Tsinghua University, China. Aaron Schneider is Leo Block Professor of International Studies at the University of Denver, United States.
