

1. Record Nr.	UNINA9910639995403321
Autore	Giampietro Philip
Titolo	Genetic Conditions Affecting the Skeleton : Congenital, Idiopathic Scoliosis and Arthrogyrosis
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
ISBN	3-0365-5976-0
Descrizione fisica	1 electronic resource (172 p.)
Soggetti	Research & information: general Biology, life sciences Genetics (non-medical)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	In this Special Issue of Genes entitled "Genetic Conditions Affecting the Skeleton: Congenital, Idiopathic Scoliosis and Arthrogyrosis", evidence is presented that suggests that congenital, idiopathic scoliosis, and arthrogyrosis share similar overlapping, but also distinct, etiopathogenic mechanisms, including connective tissue and neuromuscular mechanisms. Congenital scoliosis (CS) is defined by the presence of an abnormal spinal curvature, due to an underlying vertebral bony malformation (VM). Idiopathic scoliosis (IS) is defined by the presence of an abnormal structural spinal curvature of 10 degrees in the sagittal plane, in the absence of an underlying VM. Arthrogyrosis is defined by the presence of congenital contractures in two or more joints of the appendicular skeleton. All three conditions have complex genetic causes. This Special Issue highlights the complex nature of these conditions and current concepts in our approach to better understand their genetics.
