Sommario/riassunto	Urban planning practice will undergo significant changes in the upcoming decades, due to major changes and challenges the world has to deal with, such as loss of biodiversity loss, climate change impacts,

agricultural transformation, water management issues and health. The way the urban professional has to relate to this new order is explored in this book by collecting a series of conversational chapters with local, regional, national and international experts in the fields of urban planning and design, urban and building development, building and construction industry, architecture, governments and academia. The unification of a desirable future with real world processes such as economic and decision-making practice is key. Moreover, the attitude of the future urban professional will more and more shift from an expert in a specific field to a communicative advisor in complex processes.
