### Sommario/riassunto

This book provides insight on the concept of social value and social return on investment (SROI) - or measures to evaluate the social outcomes from interventions, beyond simply jobs and income. It offers a new and holistic perspective on the values generated from environmental stewardship and forest governance, and focuses on the methods, approaches and outcomes for understanding social value and SROI. The book offers new directions in social value and SROI, including cultural and spiritual outcomes, gender equity, and health and well-being, and provides pathways for implementing interventions and measuring social impact. It includes state of the art approaches from diverse and interdisciplinary experts drawn from academia and professional practice, including the voices and perspectives of Indigenous Peoples and local communities involved in programs, with a focus on environmental stewardship. Social value and SROI are increasingly used to assess outcomes from conservation and this book broadens the conversation on the impact and business case for these interventions. The book offers practical guidance to readers in pursuing social value and those seeking to measure it.
