## Sommario/riassunto

Without consciousness we would not have the experientially flavoured world we have, but without the non-conscious we would not have it at all; for we would not be able to breathe, eat, move, walk, feel, mimic, gesture, laugh, etc., and even see, talk, remember, reason, understand, think, imagine, and make myriad spontaneous decisions as we continuously do in all life situations, from trivial to existential ones. Without consciousness we would not be the kind of creatures we are, but what makes us really unique is our specific non-conscious constellation - a basis from which all mentality germinates and which is irreducible, that is, not representable or in any way simulable. This collection of essays by leading scholars in consciousness aims to show that in order to understand mind as a whole we have to also consider its non-conscious part. Obtaining a more thorough insight into the non-conscious is indispensable for a better understanding of consciousness - the two spheres are to.
