

1. Record Nr.	UNINA9910657272303321
Titolo	Ocean acidification // edited by Jean-Pierre Gattuso, Lina Hansson
Pubbl/distr/stampa	Oxford ; ; New York, : Oxford University Press, 2011
ISBN	0-19-150178-6 0-19-191800-8 1-283-91917-6
Edizione	[1st ed.]
Descrizione fisica	xix, 326 p. : ill. (some col.), col. maps
Altri autori (Persone)	GattusoJean-Pierre HanssonLina
Disciplina	551.46
Soggetti	Ocean acidification Water acidification
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover -- Contents -- Foreword -- Preface -- List of abbreviations -- List of contributors -- 1 Ocean acidification: background and history -- 1.1 Introduction -- 1.2 What is ocean acidification? -- 1.3 The biological and biogeochemical processes that are potentially affected -- 1.4 A short history of ocean acidification research -- 1.5 Risks and policy implications -- 1.6 Conclusions -- 1.7 Acknowledgements -- 2 Past changes in ocean carbonate chemistry -- 2.1 Introduction -- 2.2 Seawater carbonate chemistry -- 2.3 Controls on ocean carbonate chemistry -- 2.4 Long-term changes during earth's history (quasi-steady states) -- 2.5 Ocean acidification events in earth's history -- 2.6 Conclusions -- 2.7 Acknowledgements -- 3 Recent and future changes in ocean carbonate chemistry -- 3.1 Introduction -- 3.2 Basic chemistry under change -- 3.3 Atmospheric CO ₂ emissions, sources, and sinks during the industrial era -- 3.4 Observed changes in ocean carbonate chemistry during recent decades -- 3.5 Future scenarios -- 3.6 Projecting future changes in carbonate chemistry -- 3.7 Conclusions -- 3.8 Acknowledgements -- 4 Skeletons and ocean chemistry: the long view -- 4.1 Introduction -- 4.2 A record of atmospheric pCO ₂ and past global change -- 4.3 Is there a more general historical pattern? -- 4.4 Summary, with lessons for the future

-- 4.5 Acknowledgements -- 5 Effects of ocean acidification on the diversity and activity of heterotrophic marine microorganisms -- 5.1 Introduction -- 5.2 Microbes in the ocean -- 5.3 Ocean acidification: approaches and evidence -- 5.4 Implications -- 5.5 Acknowledgements -- 6 Effects of ocean acidification on pelagic organisms and ecosystems -- 6.1 Introduction -- 6.2 Planktonic processes and the marine carbon cycle -- 6.3 Direct effects of ocean acidification on planktonic organisms. 6.4 Synergistic effects of ocean acidification with other environmental changes -- 6.5 Ecological processes and biogeochemical feedbacks -- 6.6 Critical information gaps -- 6.7 Acknowledgements -- 7 Effects of ocean acidification on benthic processes, organisms, and ecosystems -- 7.1 Introduction -- 7.2 The effect of ocean acidification on major biogeochemical processes -- 7.3 Effect of ocean acidification on benthic organisms, communities, and ecosystems -- 7.4 Conclusions and final remarks -- 7.5 Acknowledgements -- 8 Effects of ocean acidification on nektonic organisms -- 8.1 Integrative concepts relevant in ocean acidification research -- 8.2 Effects of ocean acidification on fishes -- 8.3 Effects of ocean acidification on cephalopods -- 8.4 Conclusions and perspectives -- 9 Effects of ocean acidification on sediment fauna -- 9.1 Introduction -- 9.2 Distribution of carbon dioxide (CO₂) and pH within sediments -- 9.3 The impact of macrofaunal activity on microbially driven geochemical processes -- 9.4 Sediment fauna as 'ecosystem engineers' -- 9.5 Assessing the potential impacts of ocean acidification on infaunal organisms -- 9.6 Summarizing the vulnerability of infaunal organisms to ocean acidification -- 9.7 Conclusions -- 9.8 Acknowledgements -- 10 Effects of ocean acidification on marine biodiversity and ecosystem function -- 10.1 Introduction -- 10.2 Biodiversity and ecosystem function -- 10.3 Acclimatization and adaptation -- 10.4 Effects of environmental change -- 10.5 The effects of ocean acidification on organisms -- 10.6 Habitats -- 10.7 Implications of biodiversity loss -- 10.8 Conclusion -- 10.9 Acknowledgements -- 11 Effects of ocean acidification on the marine source of atmospherically active trace gases -- 11.1 Introduction -- 11.2 Effects of ocean acidification on DMS production and its impact on climate. 11.3 Impacts of ocean acidification on organohalogen production and atmospheric chemistry -- 11.4 Conclusions and future research needs -- 11.5 Acknowledgements -- 12 Biogeochemical consequences of ocean acidification and feedbacks to the earth system -- 12.1 Introduction -- 12.2 The marine carbon cycle -- 12.3 The marine nitrogen cycle -- 12.4 The ocean as a source of atmospherically active trace gases -- 12.5 Conclusion and perspectives -- 12.6 Acknowledgements -- 13 The ocean acidification challenges facing science and society -- 13.1 Introduction -- 13.2 Why society should be concerned about ocean acidification -- 13.3 Valuing the oceans -- 13.4 The relevance of ocean acidification to individuals -- 13.5 Communicating ocean acidification to policy- and decision-makers -- 13.6 Wider communication of ocean acidification -- 13.7 The response of policymakers -- 13.8 Geoengineering and its relationship to ocean acidification -- 13.9 Conclusions -- 13.10 Acknowledgements -- 14 Impact of climate change mitigation on ocean acidification projections -- 14.1 Introduction -- 14.2 Scenarios and metrics -- 14.3 Baseline and mitigation emissions scenarios for the 21st century: how much acidification can be avoided? -- 14.4 Inertia in the earth system: long-term commitment to ocean acidification by 21st century emissions -- 14.5 Regional changes in surface ocean acidification: undersaturation in the Arctic is imminent -- 14.6 Delayed responses in the deep ocean

-- 14.7 Pathways leading to stabilization of atmospheric CO₂ --
14.8 Conclusions -- 14.9 Acknowledgements -- 15 Ocean
acidification: knowns, unknowns, and perspectives -- 15.1 Introduction
-- 15.2 Knowns and unknowns -- 15.3 Ecosystems at risk -- 15.4 Past
limitations and future prospects -- 15.5 Conclusions -- 15.6
Acknowledgements -- Index -- A -- B -- C -- D -- E -- F -- G -- H --
I -- J -- K.
L -- M -- N -- O -- P -- Q -- R -- S -- T -- U -- V -- W -- Y -- Z.

Sommario/riassunto

The ocean helps moderate climate change thanks to its considerable capacity to store CO₂, however the consequences of this process, known as "ocean acidification", are raising concerns for the biological, ecological, and biogeochemical health of the world's oceans, as well as the potential societal implications.
